NEWS IN BRIEF

Mirror halts new technology

DIFFICULTIES with the computer-driven page make-up system at the Daily Mirror have led its management to drop the development, for the time being, and revert to manual make-up by cutting and pasting.

The Linotype-Paul system using large storage CRT screens was taking much longer to assemble pages than traditional hot metal methods. This led to serious production delays.

Jail terms cut

TWO men who were jailed at the Old Bailey last year for a £275,000 blackmail attempt against ICI (CW, February 9, 1978) had their sentences reduced in the Court of Appeal last week. Rodney Cox, 28, a senior operator at ICI's Rotterdam site, and Peter Jenkins, 28, a freelance programmer, had their six and five-year terms reduced to four and three years respectively.

PO micro trial

A TRIAL of automatic call recording equipment beginning this Saturday in Eastbourne, brings microprocessors into the telephone network for the first time in the UK, and possibly in the world, according to a Post Office spokesman. If successful, the ACRS equipment will be installed throughout the network from 1981, eliminating the need for telephone operators to write a ticket for each call connected manually.

Available NOW!
LA 34 DECwriter IV
30cps desktop printer

Smaller, lighter and quieter than many typewriters. Standard features include a cartridge for simple ribbon changes and condensed characters.

Staving off a 'jobs holocaust'

STATING that there is no one solution to the problems created by the free advancement of technology, particularly in its effects on the present-day work ethic, Clive Jenkins, head of the Association of Scientific, Technical and Managerial Staff, and Barrie Sherman, research director for ASTMS, have urged a "multi-dimensional approach" in our attempts to stave off a "jobs holocaust."

With the above statement, Jenkins and Sherman round off their book, *The Collapse of Work*, which explores the potential demise of the work ethic and how society is (or is not) assimilating new technology.

One of its themes is that "industrialised societies will not, in the future, be able to provide work for all on a continuing basis."

But this need not be disastrous, they say; instead we will have the prospect of ex-

ploiting what they call "great opportunities," while against that will be the possibility of a "backward step towards a post-industrial dark age."

A deciding factor in all of this would of course be the types of decisions taken both nationally and globally, some of which may indeed "fly in the face of established political practice and need international courage and vision."

A topic well-known to the authors is that of the role of trade unions in society, and of this they say: "The new technological changes will, as we shall see, have to elicit a powerful, intellectual response from the trade union movement."

Also: "Well organised trade unions in any country hold the keys to the quality of life in that country and therefore have a great responsibility."

Intel Corp acts to avert leasing crisis

DRASTIC steps are being taken at Intel Corp to secure its future following the body-blow to its leasing business from the IBM 4300, and worse than expected sales for the AS line of IBM-compatible CPUs.

The company is understood to have made a major transaction with a private finance company involving sale of the residual values of computers and transport assets on lease.

The company's problems have surfaced because it has been in process of issuing two million units of preferred stock. Late last week it cancelled the offering.

In the preliminary prospectus for the stock Intel reveals a first quarter loss on computer sales and leasing of \$4.4 million, which is a turnaround of almost \$10 million compared with the \$8.3 million profit it made in the 1978 first quarter.

Intel also says that its aggregate claims under the Lloyds "J" policy with which residual values of leased computers were insured are expected to exceed \$100 million.

Intel has struck a complex financial deal with Hillman of Pittsburgh, under which it has paid Hillman \$12.5 million in what is called a "put" option. This is on the residual values of all Intel's leased equipment, including \$48 million of computers and about the same value of ships, containers and railway trucks.

The option means that Hillman has agreed to buy these residuals at their book value if Intel asks them to, and has been paid \$12.5 million for agreeing to do so. However, no money has changed hands. Instead, the assets have been put into a new subsidiary, valued at \$12.5 million, run by Intel but owned by Hillman, which will actually liquidate the assets.

It appears that Intel concluded the deal because its accountants wanted it to reduce the book value of the computers to a more realistic figure. The deal was possible because many of the transportation assets were on Intel's books at well below their current value.

Under US Securities and Exchange Commission rules, Intel cannot make any comment other than what is in the prospectus. However, an amendment to the prospectus states that first-half results will be substantially down and that the computer sales force has been reduced. The reduction is understood to be at least 30%, thought to be about 100 people.

Observers say that Intel has been paying National Semiconductor \$350,000 for AS/3-5 processors, making it very difficult to sell profitably against the 4341.

When announced (CW, March 1), the 3-5 was offered at

\$800,000 including two Megabytes of memory, against \$245,000 for a two Megabyte 4341.

Intel's retrenchment has also included a complete withdrawal from the minicomputer marketing business, including cancellation of plans to sell the Data General CS line of business systems.

Things look brighter for Intel in the second half of the year, when OEM prices for National Semiconductor and Hitachi CPUs come up for renegotiation.

Strikers cause £350m phone bills backlog

NOW into its eighth week, the strike by Post Office computer and clerical staff has created a phone billing backlog of about £350 million and shut down all main System X development centres (CW, May 17).

It has been revealed that among special conditions attached to an unofficial corporation proposal to restructure all grades, are the introduction of contract and part-time DP staff within the Data Processing Service and the acceptance of word processing equipment into the corporation.

A spokesman for the Society of Civil and Public Servants said, "The Post Office has made at least two large loans that we know of. One example of how the dispute is affecting its cash flow is that one area that would normally take in £28 million in about seven weeks has only received about £104,000."

Engineers at two GEC Coventry works voted last week to cut their overall pay claim from 3% to 15% and to support financially 67 commissioning engineers who have been suspended by the company for not

working normally (CW, May 17). The engineers, apart from the 67 suspended, have also agreed to return to normal working pending settlement.

Go-ahead for NEB's £8m disc investment

LEGAL obstacles in the way of the National Enterprise Board's plan to invest £8 million in a disc drive plant to be set up jointly by Data Recording Instrument and CDC subsidiary, Magnetic Peripherals Inc, have been overcome and the project will now go ahead with the blessing of Industry Minister Sir Keith Joseph (CW, May 24).

The Minister has also approved the outlay of about £1 million more to buy out the 13% minority shareholding of Grundy of Teddington, which had objected to the venture. Grundy has now sought leave to withdraw its suit from the Appeal Court.

The new company will be 76% owned by DRI and 24% by MPI.

GA chief toppled—but stays as a director

THE founder, chairman and president of General Automation, Larry Goshorn, has been toppled in a palace revolution, and a professional computer company "doctor" has been brought in as president and chief executive. Goshorn stays on as director of the Anaheim California-based minicomputer, and it is not relinquishing control of the company without a fight.

As half-time figures of \$11 million net profit on \$55 million turnover for the six months to January 27 indicate, the company is in no immediate trouble but the board hopes by the reorganisation to achieve faster growth and improve profitability.

New man at the top is Frank Grisanti, whose management consultancy, Grisanti and Co of Los Angeles, specialises in improving the performance of computer companies.

Grisanti described Larry Goshorn as a "technical genius" who in turn described Grisanti and Galf as "good people", but claims that he is legally chairman and president. Other changes announced are two additional board members: lawyer Dennis Nystrom and Irwin Kwatek, an existing GM executive. John Conlon, who joined the board in 1975, becomes chairman.

Briefing
Magnuson raises \$10m

IBM-COMPATIBLE processor manufacturer, Magnuson Computers has raised nearly \$10 million of working capital for expanding its production and marketing operations, disproving the doubts about its capital raising ability expressed by New York stockbrokers, Paine Webber Mitchell Hutchins (CW, May 10).

Magnuson's M80 family of IBM 4300 compatible machines should be available in Europe by the end of the year. The working capital was raised from a number of sources in return for a total of 23% of Magnuson shares.

Bow Group on NEB

THE National Enterprise Board should be merged with the British National Oil Corporation in order to help finance strategic new industries with North Sea oil revenue, according to the Tory Bow Group. In a paper, the Bow Group asserts that the NEB should carry on subsidising ventures such as Immos, but should lose to other bodies its functions of supporting lame ducks and promoting exports and regional development.

Faster discs

TWO new low-cost fixed discs for Data General Nova and Eclipse minis, and the Micronova computer-on-a-chip, feature microprocessor-controlled "seek" mechanisms for increased speed, and Winchester technology. The units hold 12.5 Megabytes and cost around £3,300.

Bank shifts

SEVEN-DAY working has been agreed to by Barclays Bank computer staff following a recent ballot. The agreement will mean that staff will work and receive a shift allowance of 45% of salary — providing this falls between minimum and maximum annual payments of £1,131 and £2,888.

Off to the club

BECAUSE of the shortage of space at ICL's Slough offices, 11 marketing department staff are to be moved to the Stoke County Club, Stoke Poges, for up to six months while the company attempts to find new office space in Slough. According to the company, "all the staff are very pleased with the arrangements for the move, which are the normal terms offered in such a case."

Two deals off

ACQUISITION talks with Thorn and Gould have been broken off by the Florida-based mini manufacturer, Modcomp, and the company now intends to remain independent. In another take-over scheme, Bunker Ramo has rejected the bid of 20% shareholder Fairchild Industries, for a full merger.

Crowds queue in the rain for the NCC

UMBRELLA sellers did a brisk business as thousands of showgoers lined up in persistent rain to register for the National Computer Conference at New York's Coliseum this week. Among the main attractions of this show were the enhanced Honeywell page processing system, the PPS 2, which incorporates the powerful 68/43 minicomputer, and Prime's 1 Mbyte memory board for its minis. This is made of 64K bit chips.

For Dataproducts the acquisition of Plessey Inc, the UK group's printer division (page 2),

gave the company entry to the daisy wheel market and in New York Dataproducts launched a 50 cps daisy wheel printer developed by Plessey.

TIM PALMER reports from New York

The innovative bit slice Univac 1100/80 (CW, May 17), was formally announced on Tuesday in New York and yesterday, Wednesday, in London. Prices range from \$319,000 for a 512K word single processor to \$1,442,000 for a 1 Megaword dual

processor. As exclusively reported in Computer Weekly (CW, April 19), Burroughs has adopted the Xerox 9700 high speed page

processor. Paradyne has added a new product, Pixnet, to its Pix II communications system for IBM mainframes. The Pix concept is to add communications without installing communications software on the IBM host, and Pixnet extends this by supporting multiple hosts and allowing interactive terminals to connect to multiple applications programs throughout the network. It will be marketed in the UK by EMI Technology.

Two models, the 850 and the 870 which run the well-established Vulcan operating system. Paradyne has added a new product, Pixnet, to its Pix II communications system for IBM mainframes. The Pix concept is to add communications without installing communications software on the IBM host, and Pixnet extends this by supporting multiple hosts and allowing interactive terminals to connect to multiple applications programs throughout the network. It will be marketed in the UK by EMI Technology.

First personal system from Texas

The all-out attack on the personal computer business expected from Texas Instruments came last week at the Chicago Consumer Electronics Show, but it has already been labelled as disappointing. However, it will be one of the first 16-bit home computers to reach the market.

Instead of the expected three pronged entry (CW, April 12) Texas has introduced the 9804 that is aimed specifically at the domestic and consumer market. Based on the Texas 9900 chip, the system is a keyboard-based unit with separate 13 inch, NTSC standard colour display. In the UK, the system will cost £848 excluding the display. The all-in US price is \$1,150.

The system has a non-expandable 16K byte user memory, backed by 28K bytes of operating system and T1 extended Basic software in ROM. The 9804 will be available in the US sometime towards the end of the year, and should be available in this country a little later.

Wang's bid for office market

THE fiercest challenge from any manufacturer to IBM's plans for the electronic office market was announced by Wang at the NCC in New York on Monday. The equipment introduced includes an IBM-compatible electronic mail facility; the integration of word and data processing on both of Wang's main ranges, the VS mainframes and the OIS word processors; and a new 370/158 class VS model.

This last machine, the VS-100, is a 32-bit processor with 64-bit highway, costing \$93,000 for a 1 Megabyte system, compared with \$245,000 for a 1 Mbyte 4341 from IBM.

Fortran and PL/I will be available next year for both models in the VS line in addition to the existing Cobol, Basic and RPG II.

A new database system combining both features of network and relational databases has also been added for the VS systems.

Key communications features are the announcement of 2780, 3780 and 3270 protocols for both the OIS and VS lines; these protocols are also supported by the Mailway electronic mail controller enabling both text and data messages to be transmitted between OIS word processors and VS computers, and to IBM mainframes.

Integrated Information Sys-

tems, IIS, are achieved by Wang in two ways. The company's word processing workstations store almost all the required functions locally, and are now attachable to VS and VS-100 systems in any mix of word and data processing stations.

At the same time Basic has been added to the OIS line of word processors, enabling users to add data processing applications. All VS and almost all word processing users can add all

ICL clarifies stance on open systems networks

ICL re-affirmed its long-term commitment to open systems networking based on international communications standards at the 2900 Club meeting last week. At the same time it made clear that its short-term strategy was the development of the Cream family of microprocessor based protocol converters, first revealed at the CUA meeting last month (CW, April 28).

"It could well be 10 years before a firm international standards appear for open networking," noted Jack Houldsworth of the company's Letchworth development centre, "and we cannot wait. In common with other manufacturers, we will have to address the most common communication needs in the interim."

ICL, he argued, was well placed to implement facilities along with the emerging standards, being closely involved with standards activity. It would also benefit from its "onion skin" communications architecture, which would permit it to replace levels with each standard as it appeared.

ICL has not as yet announced a networking architecture along the lines of IBM's SNA or Burroughs' BNA and its present stance is seen by users as a continuing policy of "one-off" communications specials. A network architecture has, however, been expected for some time and may be announced in November, according to one source.

Users are also still waiting for the Integrated Communications Executive (ICE) for the popular 2903/4 systems. Thought to support extensive interconnection of 2903s and 2904s, ICE is believed to be under test release at a few UK sites, and may be released later this year.

The 2900 Club meeting addressed itself to the topic of communications excellence and focused chiefly on the communications facilities of VME/

Other introductions from Wang were two new OIS models, the low cost 125 and the top end 145, and a dual daisy wheel printer for users wanting to combine type fonts. Racal plans Ferranti bid if NEB is trimmed

RACAL will be making a strong bid for Ferranti if the government goes ahead with its declared intention of cutting back on National Enterprise Board activities. Confirming this, Racal chairman Ernest Harrison said his group would not be interested in acquiring any of the projects started by the NEB, such as Immos, Inspec and Nexos.

In his view the board should not have become involved in establishing new companies, but there would continue to be a need for the NEB, or some similar government-supported body, to manage the industries which would not go back to the private sector.

Harrison said any break-up of the NEB had to be done with care to ensure that the good management that the board had should be kept to handle the unsaleable companies. Harrison was not blind to the benefits to be gained from some government aid.

Giving his annual review of Racal's progress, Harrison said that the company had just received a £1.1 million order from the Post Office for Racal-Milgo MPS 48 wordens. These were for use on the new Datal 4832 service, and it was the first time that a major order had been placed by the PO for proprietary datacoms.

Outlining the group's performance, Harrison said it had been the greatest year in the group's history, with sales up to the end of March reckoned at £225 million showing a pre-tax profit of £80 million.

INTERVIEW

Not so much
a chuckle,
more a groan

THE letter about computers that was written to a provincial newspaper, quoted by Chad on page 4, may provoke plenty of chuckles, but it should also call for a good deal of disquiet. It reveals in the mind of the writer a set of ideas about computers that are so divorced from reality as to indicate a fundamental failure on the part of the media to impart any genuine understanding of the subject, to this individual at least.

It is clear that the writer has spent many hours watching television programmes on science and technology, and these programmes certainly purported to be bringing the viewers truth, to be education rather than entertainment. Yet it is also clear that this person has totally missed the point of many of the scientific matters that were presented.

In the past Computer Weekly has printed many examples of the fantastic things lay people say about computers, usually displaying either blind fear or an absurdly inflated idea of what the machines are capable of doing. Much of the blame for this state of affairs must rest with the Press and broadcasting services, whose job it is to bring new ideas to those of the public who have left school.

The difficulty, however, is not

that writers and television producers are unconscious of the problem. They spend countless hours arguing, discussing, theorising about how to bring over science to the general public. At the end of the day, though, when the pencil stubs are chewed to nothing and the ashtrays are overflowing, they still come up with the wrong answers. In television in particular, those involved will often admit that they end up choosing a scheme that makes "good television" rather than good Truth.

It is the obsession with trying to be entertaining, with trying to stop viewers from switching to

the other channel, that distracts many a producer from getting the fundamental ideas across. This problem of how to make an impact, regardless of the subject matter, afflicts everyone who works in the media, but they often fail to see when the subject matter itself can be entertaining, if treated with patience, and if the reader/viewer is credited with a modicum of intelligence.

Two recent BBC programmes illustrate this — the first was on Einstein and the second on Time. Both failed abysmally to get across any rational understanding of the ideas involved (which were of course very profound). Both employed well-

known comic actors to walk around muttering "amazing, fantastic... the mind boggles... as 'gee-whizz' data" was fed to them by scientists who might have known better. And when all the gee-whizz was over, the viewer, whether well or poorly educated, was left the wiser.

The Lancashire Telegraph letter gives an interesting insight into how misguided ideas can be acquired. Clearly the idea about "energy radiations" being picked up from rooms or beds where people have been comes from a programme on infra-red cameras. The programme failed, however, to get across the basic point that the camera is registering the residual warmth left by the person, which of course fades away in a short while.

The point has been made that the sum total of ignorance in the world is steadily increasing, as technological change outstrips the capacity of individuals to assimilate information. The implications of this for democracy are very serious, however. As society gets more and more technically oriented it is vital that the electorate be able to judge soundly the pronouncements of politicians, to prevent technological wool being pulled over its eyes.

In the shorter term, consumers need to be able to rebut the over-persistent excuses of "The computer made a mistake," or "We can't do that because of the computer," or "You have to do it this way because..."

Thankfully the practical experience of computing which many thousands of schoolchildren are now getting will enable the next generation to deal with these problems much more effectively. In the meantime, however, the media must make a concerted effort to enlighten the public — to strip away mysteries rather than pile them on.

thought that a top-level team of advisors, plus perhaps skilled engineers could be rapidly summoned, would be of great comfort.

Unfortunately it seems that initially at least, the IDPM scheme, is limited to micro surgeries with a phone-in facility later in the summer. Particular emphasis is being given to first-time business users, who are probably most in need of sound, practical and hopefully rewarding advice.

The whole concept would seem to warrant some industry reward of its own for enterprise and originality. But it must be hoped that the organisers haven't overlooked one vital factor. To establish a professional computing surgery, there should be adequate stocks on hand of old issues of Computer Weekly.

1984 and all that...

A PRIZE of £5 is awarded for each contribution from a reader to our column of the strange things people say in the media about computers.

"It's so hard to weigh up the pros and cons [over the European elections]," said a cheerful woman in the car park. "We are as poor as a church in Twickenham. We want all the information we can get." Her husband had been deeply impressed with Mr Heath. "A marvellous speaker, just like a computer," he said admiringly.

COMPUTER WEEKLY
JUNE 5, 1969

Because of delays and uncertainty about ICL's design of an operating system, the Ministry of Agriculture went ahead with its work for the year without it. Two bureaux, CRC (now UK arm of GSI) and Adonis (now part of Oxford), started operation on SDS June 5... The Adonis described as a second generation of the machines, was announced in Russia... The first Mark 1 8250 placed in memory was delivered to the Foreign Office communications system. It had a 100,000 capacity and was for use on an ICL 1900A ordered for the Government Communication HQ at Cheltenham.

Dataproduct
acquires
new printer

A DAISYWHHEEL printer produced almost unnoticed in the US last year by Plessey's Coast subsidiary Peripheral Systems Inc. has been acquired by Dataproduct. The big OEM line printer specialist of Woodland Hills, California, has bought the printer division for an undisclosed sum.

The AlphaGrid printer is a 4-chip daisywheel device with 132-column format, a plant in Irvine, California employs 85 people making printers a month.

CAP-CPP
cashes
in on
MicroCobol

CAP-CPP is beginning to reap the benefit of its substantial investment in MicroCobol, having now achieved some 30 installations and licensed the software to 20 OEM vendors. At the same time it has announced its first MicroCobol application packages in the form of purchase, nominal, and sales ledger systems.

Rapid progress has also been made by CAP on implementing the system for new machines, with 13 hardware types now supported. These include the IBM Series 1, DEC PDP-11, Transdata CX400, Sord 223, Triton 3, Zenek ZMS 70, ADDS System 70, and Mostek SYS-80F. However, no implementations are planned for the current generation of personal computers, such as the Apple or Pet, partly because of main memory and storage restrictions.

A more important reason is that such systems fall outside the carefully-defined market sector currently being addressed by CAP, namely the "explosive" demand for low-cost micro-processor-based systems from first-time commercial users.

That it is aiming at this sector is emphasised by the substantial difference in cost between MicroCobol products and typical "personal" software.

The application packages, for example, each cost around £1,000 while the Business Operating System (BOS) — a prerequisite for any MicroCobol system — is priced at £450.

Although only needed by vendors and sophisticated end-users, the MicroCobol development system — including the compiler, linker, librarian, and editor — is priced at £2,000, while two further facilities, the AutoClerk file maintenance and reporting package and the Autoindex database and inquiry package, are priced at £1,000 and £300 respectively.

Of the 30 MicroCobol sales so far, about half have been made directly by CAP and the rest by the licensed distributors. However, with further licensing agreements being signed at around one per week, this sector should rapidly overtake.

VLSI silicon devices
seen as 'black hole'

A GRAPHIC description of very large scale integration by silicon devices as a technological "black hole" with an ever-expanding event horizon was given this week at the Motorola Microforum by Colin Crook, managing director of Rank Precision Industries.

Giving the keynote address as forum chairman, he said that silicon technology continued to absorb more and more of the systems business with time. "Every year, significant portions of the sub-system, and ultimately system, pass over the event horizon and fall irreversibly onto the silicon," he said.

With the advent of 1 million and 10 million transistor chips, silicon achieved control. "Then the question is whether the UK is involved with silicon processing or buys from the US and Japan."

He went on to reiterate the point made in Philadelphia by Gordon Moore of Intel (CW, February 22) that the major problem was defining what actually to make with the technology.

"The silicon black hole now begins to warp the very nature of the market and end user," he said. "At this level of integra-

Problems of policing society

THE problems of policing society in the 1980s will be made more difficult by the speed at which technological change is outstripping people's ability to adapt to the new circumstances.

Speaking at a meeting of chief police officers and local authority representatives last week, Arthur Burrows, director of the Police Scientific Development Branch at the Home Office, based this prediction on the premises and question: "As all our material needs will eventually be met by only 10% of the potential workforce, what will the other 90% be doing?"

However, technology itself could provide much of the answer to this problem said Burrows. "In the 1980s, all the devices required by the police could be made available."

One device that could see a far quicker application in police investigative work is a micro-based Photo-Fit system (CW, November 30, 1978) which uses computer-aided design techniques to construct and modify the facial characteristics of suspects based on information from witnesses.

Software for the system has been completed by the Computer Aided Design centre in Cambridge in conjunction with advice from Aberdeen University's psychology department.

"We are now working on the system so that it will be completely portable and therefore enable police officers to use it in the home of a witness."

The present idea is that it will plug into any domestic television much like a TV game and the screen will provide the display.

Japanese aim at
lead in decade

HAVING just about caught up with the US on computer technology by taking Honeywell licences and by copying IBM, the Japanese are planning to streak ahead when the fifth generation of mainframes arrives at the end of the 1980s.

MITI, the Japanese Ministry of International Trade and Industry, has formed a Fifth Generation Computer Survey and Research Committee which will lay plans for the generation of computers to follow IBM's H-series.

The committee is sitting under the chairmanship of Prof Tatsu-Motoko at the University of Tokyo, and has already decided that for Japan, very large-scale integrated circuitry is in, but Josephson Junctions, the super-cooled logic circuits about which IBM has released considerable research material, are probably out.

Also out is Von Neumann architecture, the architecture which is the basis of almost all today's computers. Pattern recognition and imitation of the operation of the human brain will be closely studied.

The idea is to break away from the traditional approach of designing the hardware and then mapping the software onto it; instead the committee wants to design the software and general system operation, and then try and fit a hardware design to it.

Prof Toshiyasu Kunii, also of Tokyo University, is the ori-

Let our training
take the strain...

If you want the best out of your people, someone has to put the best in — and do it in a way that enthralls, not confuses.

That takes experience. People experience, hardware experience, professional training experience. Datasolve's comprehensive training courses are based on more experience of ICL 2900 VME/B and IBM/MVS systems and hardware than probably anyone else has ever accumulated.

BOC Datasolve balances practical and theoretical training. We take trainees to full competence and convert seasoned staff to new environments — in operations, software, systems analysis, programming and APL.

The people problems you have today we've been solving highly successfully for years. Which adds up to a great start if you train with Datasolve — or a lot of old ground to re-tread if you don't.

To find out where we're at in your field of training, tick the boxes and post the coupon to:

Downtime

by Chad

Calling all doctors, dentists and acupuncturists...

"AS others see us" is one of the themes of our "1984" column; we are continually coming across touching examples in the local Press of how ordinary people view computers. It is seldom one finds a piece so elegant, so all-embracing, so satisfying, as this letter from the Lancashire Evening Telegraph.

I was interested in the feature on "Tomorrow's World" showing how lettuce was grown by computer.

Could we not therefore have a computer for humans telling us everything about our bodies, the blood, urine, and acupuncture meridians?

The energy given off by each organ in our body has a certain gyration and oscillation in health and any deficiency would show up telling us what disease each organ may be suffering from.

Each disease within our

body also gives off its own gyration and oscillation, and we could tell immediately which germ may be present within our body which could save a lot of lab tests.

I am sure someone in Blackburn builds computers, and all doctors, dentists, acupuncturists, etc should get together with their knowledge. It takes all kinds of medical knowledge to get the full range of requirements.

The air in Blackburn shops and operating theatres could be tested continually, which would reveal any dangerous chemicals or germs.

People may not think it necessary to have these computers in big stores or doctors' surgeries, but just think what a help it would be to the NHS and to every person. I think every person should know more about their body.

The computer could give a written report for people to

take to their doctors if anything became abnormal.

A lot of lives could be saved and what could be tested at death or in the grave is beyond our imagination. The going on in the grave or at cremation should be tested then perhaps we would see the church's teaching brought to life and the doubts about death gone for ever.

We only need to think of what the computer revealed in the shroud of Jesus and the Mev (millions of electric volts - energy) with which He rose from the human body in spirit.

Our wavelengths are still connected to our loved ones and we CAN connect up to them after death, and I am sure the computer could do so...

What about it Blackburn? It is a money-making product and the more made for stores, doctors' surgeries, etc the cheaper it will be.

Last year's Derby winner, Shirley Heights, pips Hawaiian Sound at the post in the 199th run of the classic. Mr Professor George (see below) clean up on the bi-centennial!

The gentle art of Basic fluttering

ABOUT a year ago I wrote a computer program for football pool forecasting. This was the third I had written, but the first that worked well. Now I have turned my hand to horse-racing programs for the computer, and have already written four in

both Algol and Basic.

The fundamental idea is that gambling programs have at least something in common, and this is their concern with uncertainty. This in turn suggests probability and statistical methods.

There are at least two jobs to be done, firstly to collect and sort the vast amount of data available on horse racing all over the world. This data then requires treatment by the standard methods of statistical analysis, such as standard error and the mean, difference between means, correlations, chi-squared, analysis of variance, factor analysis and so on in a whole mass of variations.

The second job is actually to forecast the result of horse races in the light of the rules or

which is essentially adaptive.

This allows the computer to inform the user of a change in probability which necessitates change in the bets. An example would be the possibility (in the light of age and accumulating evidence) that in rule 5, the upper limit should be 10-1 against rather than 12-1.

A second example might involve the separating of winners from each way bets by dividing point 6 above into two groups. Winners should be the first two of SPs and WARs and each bet should be in the first four of SPs and WARs. The possibility of "fine tuning" the system adaptively is evident.

Two programs have been written for each of the two in Algol and two in Basic.

Why leave the choice of shirt-bearer to the tipsters at the back of your daily newspaper? Prof Frank George has devised ways of making the formbook yield its secrets in Basic and Algol.

hypotheses we have constructed in the light of the selected data. Let me indicate the sort of hypothesis we are checking out by these means. The following is a typical example.

We eliminate from consideration: (1) All horses for which we have no data, i.e. have never run before; (2) All horses that have gone up one class (or especially more than one class) for the first time; (3) All horses that have been placed neither in their last two races nor in 50% of their races; (4) If you are betting to win, the horse must be in the first three in the betting and the odds must not be less than 6-4 against; (5) If you are betting each way, the horse must be at least 4-1 against and no more than 12-1 against; (6) The horses involved should be in the first three in the speed figures (SFs) and also in what are called weight adjusted ratings (WARs); (7) The going (state of the ground) must be right for the horse.

We are not presenting an exhaustive list, but only the bulk of the core factors.

Furthermore, the factors can be treated in two different ways. The first is the use of yes/no questions and suggests decision tables, and the more recent form of decision tables called Testrolog programs.

The second way is to use weightings which are on a numerical scale. This last method can also be used with a calculator.

The great advantage of the computer in this field lies not only in processing speed for the forecasting, but even more in the statistical analysis which is a necessary precursor to the application of the various forecasting systems and methods. Just as vital, the updating of the records in a database

and all have been operated in the light of the selected data. ICI, 1903A. Versions have also been run on minicomputers.

The following example of a Basic program shows the factors involved for the number 1 weighting of the horses in which, for simplicity, we use only 4, with the improbable names of trees - OAK, ASK, ELM and BEECH. There is a set of numerical characteristics attached to each, representing our list 1-7 above, and some more besides.

We can then add up the number characteristics for each horse and list the totals in order. Here is the sample.

```
10 DIM X(4,10,54)
20 REM SYSTEMS LOOP
30 FOR A = 1 TO 4
40 PRINT "ENTER NUMBER CHARACTERISTICS"
50 REM LOOP
60 FOR E = 1 TO 10
70 INPUT X(A,E)
80 NEXT E
90 NEXT A
100 FOR A = 1 TO 4
110 LET S(A) = 0
120 FOR E = 1 TO 10
130 S(A) = S(A) + X(A,E)
140 NEXT E
150 NEXT A
160 PRINT "OAK", S(1)
170 END
```

When all the horses listed for any one race, until an hour or so before the race, check the program could not do that, but overweight carried on offered.

This then determines the nature of my actual bet, the race, we place the position of each horse, into the data base, and then recover the future.

Row brewing over Mirror technology

BITTER rows are in danger of blowing up between Linotype Paul and its customers in several countries as difficulties persist with the operation of computer-driven newspaper page makeup systems, such as that at the Daily Mirror (CW, May 31).

Firms in other countries are reported to be unhappy with their Pageview systems, and are blaming Linotype Paul's software.

Recently, Percy Roberts, chief executive of Mirror Group Newspapers, announced the group was giving up attempts to assemble pages on screens and was reverting to manual paste-up of photocomposer output, pending resolution of difficulties that were causing "serious delays" in production.

Mirror staff felt that while the equipment can produce simple, "slabby" pages it is inadequate to handle the Mirror's elaborate eye-catching layout. The machinery takes a very long time to produce such output, but the human operation is also slow.

There are also functional flaws, they claim. For instance, the storage screens can only display six different type fonts, and these have to be used to represent all the other printing fonts that are used for headlines.

It sometimes happens that a finished page can look perfectly all right on the screen but when produced on paper, lines of type are found to be overlapping.

A Linotype spokesman claimed however that both the hardware and the software were perfectly adequate, and the problems were caused by the paper's management policies

and incorrect operation. Mirror staff had not been adequately trained, he said. "Our equipment works," he asserted. "We have over 200 installations."

A joint working party has been set up by the Mirror and Linotype to try to find solutions. The Linotype spokesman expressed confidence that the page makeup system would be working satisfactorily within three months.

Tape is cut at Memorex HQ

THE new headquarters of Memorex UK was formally opened in Staines last week at a ceremony which was attended by local dignitaries and businessmen. Memorex House, in Church Street, Staines, includes a large warehouse for imports.

Managing director of Memorex UK, Mike Kitching, explained that after the acquisition of Telex in 1978, the company needed substantial regrouping, and the move will bring together all the company's functions, including sales, repairs, training and administration, so that Memorex House

would be the "nerve centre of all Memorex UK operations."

Memorex has branch offices in Bradford, Edinburgh, London, Manchester and Nuneaton.

APT language

A SUBSET of the numerical control language APT has been implemented for the GEC 4000 series. Called APT 4000, the software was developed jointly by the Rugby computer centre of GEC Machines and NEL at East Kilbride and is now being used for production work at Rugby.

Mathematica, NCSS deal to market Ramis on 3200

A VERSION of the database management system Ramis II that runs on the National CSS 3200 has been developed by Mathematica Products Group. Called Ramis 3200, it runs under the NCSS operating system VPS.

The software will be marketed in con-

junction with the "super minicomputer" by both NCSS and Mathematica, under an agreement permitting each company to sell both products.

As Ramis II has been widely installed by service companies and bureaux, one obvious market for the system will be service com-

pany clients whose level of usage now justifies an in-house machine.

The software could also prove attractive for distributed processing applications, permitting Ramis II applications to be off-loaded without change from a mainframe to one or more satellite minicomputers.

Honeywell names new support boss

HONEYWELL Information Systems has appointed Kevin Kennedy a director of the customer services division. He will report to Brian Long, who is managing director of Honeywell Information Systems and will have overall responsibility for the company's field engineering and support activities.

Kennedy joined Honeywell in 1964, and since then has held the positions of field engineering branch manager and northern regional marketing support manager. In 1978 he was appointed the first manager of the Honeywell branch which serves the Littlewoods organisation.

Most recently he was northern regional director of the data processing division. He will be based in Brentford.

BCS issues guidelines for teaching schools DP

IN an effort to alleviate the failure of many school computing syllabuses to keep pace with changing technology, a working party of the BCS Schools Committee has produced a pamphlet for teachers listing the basic topics that it feels should be incorporated as a priority in all school curricula.

The working party was concerned, according to chairman David Tinsley who is computing inspector for Birmingham schools, that teachers now with their limited experience were not equipping their pupils properly to deal with the very different technological world of the 1980s. Thus the topics chosen were fundamental ones, by and large independent of technical factors.

Among the topics listed are: the concept of input-process-

output; automatic control of processes; the use of software packages; information storage and retrieval; the cashless society; computers and people; communications systems; and, computers in the economy.

Also mentioned is "Computer manipulation of text, number, picture, and spoken word". This deals with textedit and viewdata, office systems, and CAD. Artificial intelligence is also listed as a topic, as is the effect of computers on employment.

Tinsley emphasises that the working party is not laying down a syllabus; it is up to the ingenuity of teachers to decide how to incorporate the suggestions into their own courses. It is felt though that every student should be exposed to the topics, whether in computing courses or as part of other subjects.

West Centre Hotel is venue for viewdata exhibition

DESIGNED to attract potential viewdata users and information providers at a time when mass production of viewdata television is properly under way, and Prestel is in full service, the Professional Viewdata Exhibition is planned for November.

Sponsored by Viewdata & TV User, a sister magazine to Computer Weekly, the exhibition is supported by Avip, the Associa-

tion of Viewdata Information Providers as well as the Post Office, the Central Office of Information and the Department of Industry. It is to be held at the West Centre Hotel, London, on November 7 and 8.

Exhibits will include editing equipment, private viewdata and teletext systems, microcomputers for running teletextware and a variety of user terminals. Peripherals are expected to include printers, bulk storage devices such as cassette recorders and floppy disc drives, keyboards and graphics design aids.

Inquiries are invited from potential exhibitors by the organisers, Iliffe Promotions, Dorset House, Stamford St, London, SE1 9LU. Tel: 01-261 8865.

OUR REPUTATION IS FOUNDED ON FAILURE.

Mains power failure, fluctuations, spikes and transient voltages. Because it's only in those situations, when your hardware and peripherals are at risk, that Chloride Transpack uninterruptible power supply (UPS) systems and their hyper-reliable static inverter technology come into their own.

Transpack UPS systems ensure that not only is your equipment supplied with power, but with power of consistent quality. They reduce malfunctions, loss of information and costly downtime. And remember, Transpack static inverters involve no moving parts. That makes the system much more reliable.

Chloride Transpack. The uninterruptible power supply system for today's sophisticated DP and process installations. Read the facts for yourself.

The upper trace shows UPS output power in unaltered by a mains failure.

DATA CUSTOMER SERVICE OFFICER

If you've trouble, he'll shoot it.

Each Post Office Telecommunications Area Office now has a troubleshooter to deal with any special problems you may have.

Because, with over 100,000 modems in use and demand growing at around 20% a year, we felt it was time we strengthened our after-sales service.

So we've introduced the Data Customer Service Officer.

He's there to co-ordinate matters when things go wrong and is an entirely new part of our service.

For purely technical hitches, call our service engineers as usual.

But, if you've any other problems, our DCSO's your man. He'll get to the root of the matter quickly and get the wheels turning again, calling in anyone needed to put things right.

So, if you've any problem which calls for a rapid answer, call your local area office and ask for him.

Post Office Telecommunications

GILB'S MYTHODOLOGY

THE checkword technique is well known to the general public, but little understood and practised by computer specialists. I have applied it extensively for almost 20 years, and can highly recommend it as a means of helping detect and even automatically correct input data errors.

The general public knows the concept well as it is used in postal addresses. Using my own address as an example, my postal code is 1410 and the name of my community is Kolbotn. Kolbotn is a checkword for the code 1410.

When writing a bank cheque we write the amount with numbers, for example "1,000" and then we protect the cheque against accidental or deliberate error by writing a checkword (no pun intended) "One thousand."

The name "checkword" is intended to force a mental comparison with the well-known check digit method. Both methods will detect the same group of accidental (keying and handwriting or data-transfer) errors. Depending on how independently of the identifier you gather the

checkword, checkword designs will give you a means of making sure not only that the identifier is "valid," but that it actually refers to the real world object which the user intended it to refer to. In one thoroughly audited accounting system, we found that two-thirds of the account number errors we caught had valid check digits, but were incorrect account numbers. Many of these could probably have been caught by means of a checkword.

The only clear advantage of check digit methods is that the checking process can be carried out offline to any sort of file. It is a pure and simple numerical consistency check. In cases where this advantage has been important, I have designed a combined check digit and checkword identifier. The check digit method captures some errors early, such as keying mistakes. Then the checkword method is also used to give us assurance that we have indeed identified the product, customer or account which was originally intended.

Imagine for a moment that all telephone numbers had a check digit which was verified

when we dialled a number. We would still dial a lot of wrong telephone numbers, and need to verify the correctness of them by asking for the name of the person (the checkword) we wanted to speak to.

The primary requirement for checking a checkword is that we have a file (table or database will do quite nicely too) so that we can match the input checkword to the corresponding file checkword. In batch processing applications, this means that we don't know about some errors until well after the data has been manually keyed in. Now if knowing immediately is critical, then we should probably go online with the data capture process. Otherwise, it is better to discover that you have an input identifier error late, before you update a file, than not at all or after you have updated it.

A checkword does not have to be a long word. I frequently use two characters, often about four characters and rarely more. The more you do use, the greater the error detection and error correction power you have. In extreme

Advantages of the checkword

cases we design the checkword so that it is unique. This rarely costs more than 4 to 6 characters. But even with total failure or destruction of the main identifier, it gives 100% probability of fully automatic correction to the intended identifier. The unique checkword is simply used as the search key.

In some cases a checkword is purely numeric. In specific instances I have used the price of a product; the birth date of a bank account holder; or the telephone number of medical doctors, as checkwords.

One highly technical view of a checkword is that it is a case of "distinct repetition." I'd better hasten to define the terms. Repetition is serial (but not necessarily continuous) repeating of a term, such as is customary with the numbers in a telegram. For example, using my telephone number "80 16 97 801697". If a single digit is incorrect or digits are transposed, then I can detect

this by comparison. In the example, I consciously introduced one type of distinctness by using spacing between digit pairs in one number but not in the other. The telegram introduces a kind of distinctness by repeating numbers at the bottom of the telegram.

For even stronger protection against "parroted" errors, we can introduce even more distinctness into the design. For example "80 16 97 GILB". In this case multiple parroted errors (70 16 97 701697) are almost certain to be detected (80 16 97 G/LB) as are most other common errors (80% of errors are single-digit ones in some investigations).

In addition, there is more information to develop a correction hypothesis; often one which can be developed and tested automatically. But, frequently, one is developed which can be evaluated with a little human help, by selecting from a short-list of possibilities.

The checkword method has a number of advantages which space does not permit me to explore here. It is easy to add on to existing systems. It is highly applicable to almost all identifier design situations. But we have described it thoroughly in a chapter of our Humanised Input book (Gill/Weinberg, Prentice-Hall).

I hope the reader of this column has been provoked to review the theory of checkwords, and to try out their application in practice. If you think it won't work, or won't improve your applications, then I suggest that you have NOT understood the method. Try again!

PROGRAMMER NOTES

How many of your applications are really necessary?

IS the much-discussed shortage of DP staff genuine or is it a by-product of excessive — and unnecessary — computerisation? This is the question raised by a reader from Coventry, who appears to think that many DP applications are redundant.

"The mythical man on the top of the Clapham Omnibus could, after perusing the back end of Computer Weekly, reasonably deduce that the supply of programmers was falling far short of demand.

"But perhaps we should examine whether the demand is greater than it need be. Historically, many users installed computers because Fred down the road had one. When the beast arrived, a decision had to be made about what to use it for.

"I know! Let's put the payroll on it!" must have been a common answer. This application was usually followed by stock control, production control, general ledger, etc.

"This generated the need for bigger systems which, in turn, generated a need for databases and other software tools to make the bigger systems more manageable — and for the programmers to maintain them.

"I don't doubt that some programmers are needed for maintaining existing systems, but how many programmers and DPMs can put their hands on their hearts and say: "These new applications are vital to the profitability of the company?" Not many, I fear.

"Computer software seems to follow Parkinson's Second Law, in that income rises to meet expenditure. In the DP context, output of software rises to meet the capacity of new hardware.

"Many DP departments would be more efficient if they bought most of their software off the

peg, and the need to obtain authorisation for the purchase might lead to an examination of the real need for the application.

"All this leads me to believe that there is no shortage of programmers, but too many installations running too many applications which have little or no use.

"Perhaps the industry doesn't want to discuss this issue?"

Programmer Notes is a forum for the discussion of both technical and non-technical matters related to programming. If you are an applications or systems programmer and have views on this issue or any other aspect of programming, please write to: Programmer Notes, Computer Weekly, Dorset House, Stamford Street, London, SE1 8LU.

Puzzler

THIS week's problem is to label each edge of this cube with a different number from 1 to 12, in such a way that (a) the sum of the three edges meeting at each vertex is a constant x , and (b) the sum of the four edges round each face is a constant y .

The first question is to decide which of the thirteen numbers is not to be used. See page 63 for solution.

SOFTWARE FILE

Matching the structures

ONE interesting point made at the meeting related to the management of 2900 communications. The facilities, it was noted, are closely integrated with VME/B as a whole. It would therefore be a mistake to create a team solely devoted to communications services.

Instead, the management and support structure should match the structure of the product.

ICL's telecoms offerings still pose problems for users

AS usual last week's meeting of the 2900 Club was both entertaining and informative. It addressed itself to "Communications Excellence", concluding that ICL's standard offerings in this field still posed problems for the user.

In some areas, it was argued, VME/B communications facilities were incomplete; where they did exist, they suffered from unreliability and were in the main adequate rather than excellent.

One of the key continuing problems is the VME/B line handling software Kommyf, which ICL confirmed it was rewriting at a 2900 Club meeting early last year (Software File, February 16, 1978).

Describing telecommunication systems as the "greatest heartache" of the large 2900 systems, Roger Wallhouse of ROC Data-

disappointment that Kommyf Mark II was still in the distance. Telecommunications, he said, was the key to the future use of the 2900 series both by bureaux and by large organisations generally. Unless the 2900 had an edge in software, it would lose out to IBM mainframes because of the wide availability of IBM-targeted application software.

The subject of Kommyf was also raised by Ian Battersby, of W. H. Smith. It was, he said, "old and very fragile" and was one of the main obstacles to attaching new terminal types.

"There is a lot of interaction between the different parts of the package, which can lead to interference. If you succeed in attaching a new terminal, it's quite likely to bring down one of the existing ones."

Further emphasising the lack of resilience, the loss of a line for whatever reason would frequently leave it unusable until VME/B was re-loaded.

"A major problem with the communications system as a whole is that diagnosis is remarkably difficult. The chances of getting any diagnosis out of the system are very remote if it goes down, and it's very hard to trace where the error occurred."

Although recovery time was in part determined by the time spent on diagnosis, a recovery time even as good as 20 minutes took a lot of work to achieve. Combined with a mean time between any system failure of around eight hours, the best online availability that could be hoped for was about 90%.

This, though, was perfectly adequate for many commercial applications, including those being run at W. H. Smith.

Later in the afternoon, a call for users to work more sym-

pathetically with ICL on remedying software deficiencies prompted Roger Wallhouse to identify three areas in VME/B and the communication subsystem that should be strengthened.

The first, he said, was the addition of a personal computing facility. There appeared to be no plans for such a facility and its omission was a fundamental weakness seriously limiting the usefulness of the 2900 to large organisations.

Users should also press for improvements in IDMS, TP and multi-access. They had here, he noted, more chance of success with ICL than with other major mainframe manufacturers such as IBM.

Finally, there was scope for joint ventures to develop application software and utilities. For applications such as accounting and management information systems, there should be considerable scope for meeting common requirements with a package.

As evidence of the potential market for utilities, he already knew of more than one package under development for tape library management.

Interested parties

UNLIKE the official ICL user association, membership of the 2900 Club is not restricted to those who already own a machine or have one on order. According to a recent membership survey, only 53% are existing 2900 users with a further 35% being prospective users. Topics of chief concern to members include performance (81%) and ICL policy (66%) according to the survey.

PETER HEWITT REPORTS ON THE 2900 CLUB

Scope for tuning VME/B is significant

LIKE IBM's MVS, with which one speaker compared it, VME/B offers considerable scope for tuning. Ian Battersby, of W. H. Smith, emphasised that major savings could be made in resource use by both TP and MAC with relatively little effort.

"It's very easy to generate a 1½ Megabyte

application using TP Option. The extravagance, though, is superficial as it's fairly easy to reduce a typical application to between about 500K and 700K.

"Although it depends on the transaction rate, we find that a fairly average TP appli-

cation supporting around 30 terminals takes around 2½-3% of the OCP power of a 2970. "By far the greatest share of this — around 50% to 80% — is consumed in file handling and block and record I/O, with less than 1% accounted for by the Cobol application code. There is thus lots of scope for tuning at the system level."

Battersby also noted that it had been possible to halve the response time on one application by reconsidering the object program collection strategy.

"MAC is also amenable to tuning, particularly by adjusting the main store quota. This is a trade-off of virtual storage overhead against size, making it relatively straightforward to save significant percentages of OCP time."

W. H. Smith, he noted, ran with a MAC concurrency of between 10 and 16 for program development during the day and had settled on a quota of 144K. This took around 3.5% of the OCP power of a 2970 per session.

His general conclusion was that the sophisticated scheduling algorithms in VME/B made it perfectly possible to run a mixture of batch, RJE, TP and MAC services quite adequate for most commercial users.

Praise for TP Option not extended to MAC and RJE

view of other people's work and can both see and interfere with other jobs, creating a security problem."

"These problems can be overcome, though, with user system programming."

"In general, I can't describe 2900 communications as excellent," he concluded, "but for our purposes, they are adequate."

Although W. H. Smith had so far used TP Option only for file inquiry applications, it had found in the software all the essential facilities needed to write commercial TP programs. Further, all the facilities needed had worked.

"Programming the applications was straightforward and the Cobol interface was simple, though not standard. The package provides a good batch-oriented testing envelope, enabling one to drive a stream of test transactions through the system before going to online testing."

Comprehensive facilities were also available to the system programmer in such areas as resource utilisation and response time tuning, and file integrity and security.

Both MAC and RJE, on the other hand, provided little more than a basic window into batch facilities and their usability suffered as a result.

"MAC, for example, provides the same editor as in batch, and so makes no use of the full capabilities of the screen. Similarly, the diagnostics are batch-oriented and consequently ill adapted to screen working, in particular by being too verbose."

The terminal facilities worked well, he said, with ICL equipment and were well integrated with the System Command Language. However, it was a "long uphill slog" with other devices except in the case of teletype-compatible equipment.

"The usability of RJE is primitive, as it gives the operator poor visibility on to his own job. Oddly, he has a much better

Build a better understanding with the users of microelectronics

MICROSYSTEMS'80

Wembley Conference Centre, January 30 to February 1, 1980

Microsystems is a conference and exhibition which alerts industrialists and businessmen to the nature of this Second Industrial Revolution, and bridges the gap between the microelectronics expert and the engineers, scientists, systems designers, educationalists and others who use his skill and products. It is an open door to better business for suppliers of both hardware and software — microprocessors, memories, interfaces, peripherals... In its third year, it moves from a hotel show to the more spacious Wembley Conference Centre, with some 1,400m² of exhibition space.

TO TAKE PART IN MICROSYSTEMS '80, CONTACT LLOYD COLLINS OF "COMPUTER WEEKLY" ON 01-281 8743 or 8022 OR WRITE TO HIM AT ROOM 13, DORSET HOUSE, STAMFORD STREET, LONDON, SE1 8LU.

is sponsored by Britain's major influential groups in electronics: computer journals, including "Computer Weekly", "Systems Management", "Data Processing", "Electronic Engineering", "Microelectronics", "Worlds of Micro", "Electronic Times", and "Electronic Review". Organisers on their behalf: ICL, British Electronic Association, and the British Computer Society.

Disk packs from Control Dataset.

Because you can't choose better than the world's biggest brand.

The Control Data label on a disk pack reflects its maker's system/drive/head/media total technology capability.

Control Data is the world's largest supplier of scientific and engineering computer systems. The leading supplier of OEM peripherals, particularly of disk drives. The biggest manufacturer of disk packs and cartridges. With large-scale U.K. manufacturing facilities, for full quality control and maximum availability.

For exclusive supplies of CDC and ICL label magnetic media contact Control Dataset. You'll gain the services of Britain's most extensive and experienced sales and technical support force.

You can't choose more wisely than the biggest names in disk packs and cartridges, from the U.K. industry's largest supplier.

Call Control Dataset on 0438 3322, today.

PEOPLE AND EVENTS

Geest reorganises top management

GEEST Computer Services has announced several organisational changes, which include the creation of a management board and two divisional boards.

The management board will direct policy, planning and financial matters and Dr Colin Cooke will be a member, continuing in his role as non-executive chairman. Clifford Vivian, who is chief executive of the parent company, the Geest Organisation, will participate as vice-chairman of Geest Computer Services.

Philip Wainwright will continue as managing director with executive responsibility for the overall management and co-ordination of Geest Computer Services. Graham Gough becomes development director.

The two divisional boards will

report directly to the management board, and will each be responsible for operational control and co-ordination of their respective divisions. Philip Wainwright will be managing director of the bureau division board, and Derek Bilby, who is managing director of Cambridge Computer Services, Lea O'Reilly, director of Eastern Computer Services and Denis Churchill, managing director of Midlands Computer Centre, will also assist on the board.

A new data products division will be formed under Graham Gough as managing director, and Philip Wainwright will also be a member of this board. The division will be made up of the existing Geest Minicomputer Systems and a new division, Geest Microsystems.

Geest is aiming at two major market segments in the new operation: major users who wish to enhance the responsiveness of their existing mainframe operations, and small users who need local intelligence to utilise a comprehensive range of packages.

Ian Miller-Brook has joined the financial systems division of Gamma Associates. He was until recently market development manager for the insurance industry with Digital Equipment, working at the company's headquarters in the US.

Paul Williams has been appointed as division director of personnel resources for NCR. His previous position with the company was industrial relations manager.

Ted Litton has been appointed as managing director of Rochford-Thompson prior to the opening of the company's new factory complex in Hambridge Lane, Reading. Litton is a former financial controller and company secretary of Tibbit and Britten.

Allen Brain has joined Tandem Computers as a sales executive with responsibility for finance and banking. He was formerly a sales manager with Prime.

Karl Nightingale, a former marketing adviser for the industrial products section of the Irish Export Board, has been appointed marketing manager for Mohawk Europa, based in Limerick, Ireland.

Changes at Fluke

FLUKE International has changed the name of its Treadar division, and in the UK this group will be known as the Fluke Automated Systems Group.

Newly appointed to this division is Vic Collins, who will provide technical support for the full range of board test equipment. He recently joined the company from Micro-power where he was UK sales and marketing manager for Zilog microcomputers and support boards.

The address of the Automated Systems Group is at the company's new premises at Colonial Way, Watford.

Gareth Bennett, previously systems designer to the Royal National Institute for the Blind, has now been appointed manager of computer services. Since joining the RNIB Bennett has worked on computer translation of text into Braille.

Director of Plessey

PLESSEY Telecommunications has appointed a new director, Air Marshal Sir Herbert Durkin, to its board. He was until recently controller of engineering and supply for the Royal Air Force, up to his retirement. Sir Herbert will act as a technical adviser to the managing director of Plessey Telecommunications, Desmond Pitcher. The company is shortly to change its name to Plessey Telecommunications and Office Systems. Sir Herbert has held several senior positions and was director of engineering at the Ministry of Defence from 1967-69.

By Judith Morris

Goddard Low

Dave Goddard has become European service manager for VLSI, in charge of the company's European engineering operations throughout Europe including the UK. He was formerly UK service manager.

Grime Low has been appointed UK sales manager for the sales and marketing organisation of Beckman Instruments. He was formerly sales engineer with the company.

Fellowship

John Barnes, who is director of language research at SPI International's research centre, has been appointed an industrial fellow of Wolfson College, Oxford. This will be with the programming research group which is led by Professor C.A. R. Hoare.

Barnes is a member of the team which recently designed Ada, the future language for embedded systems.

NEWS IN BRIEF

Japanese order giant

THE Mighty new Burroughs Scientific Processor, which runs as a back end to the large-scale 87800 mainframe, has found favour with the big Japanese Information Processing Services bureau in Tokyo. JIPS is to pay \$9 million for a BSP with B7800, for installation in 12 months' time.

The BSP consists of an array of 16 arithmetic processors which operate concurrently on related data elements. The principle is similar to that used in ICL's Distributed Array Processor, DAP, but there are many fewer processors in the BSP, and each is much more powerful than those in the DAP.

Updating

OVER 30 UK building societies are installing ITT 3330 Data-printers at their head offices to improve communications with, and processing abilities from, computer bureau Centre-File. The new printers replace paper tape equipment and handle the updating of customer files held on Centre-File's IBM 3033 and 3032 systems in London.

Replacement

A NEED for better computing resources and future systems flexibility has resulted in Firth Brown Tools, a manufacturer of engineers' cutting tools, replacing its Honeywell 2040 with a Honeywell Level 64/20 machine. It has been installed at the company's Sheffield headquarters and features 312K main memory and three 100 Mbyte disc drives. Applications the 64/20 will handle include order entry, stock control and general accounting.

Traffic scheme

A TRAFFIC scheme, sponsored by the Department of Transport and Devon County Council, has begun operating in Torbay, where 27 sets of traffic lights and 22 pedestrian crossings are now controlled by a Plessey Coordinator system housed at Paignton police station. The scheme cost £300,000.

A CONSTRUCTION site cabin has become the temporary home of a Motork Data Sciences 21/40 system while it is being used by Tarmac National Construction in an £18 million contract to provide foundations for extensions to the Drax power station in Yorkshire. It will be used for on-site engineering calculations and communications with a central computer at Tarmac's Wolverhampton office. A further 10 systems — seven MDS 21/40s and three 21/60s — have also been ordered for other Tarmac sites.

Unions stress role of training in expansion

A MASSIVE expansion of worker training must be undertaken by the government if the UK is to become one of the new technology "winners" of the 1980s.

This was just one of the points made by TUC leader Len Murray at a conference on employment and technology held in London last week, which typifies the kind of stirring that is now being seen in the majority of trade unions when "new technology" is mentioned.

The initial anti-technology thrust from wary unions has now been converted into a spate of studies that seek to assess how new technology, and more specifically, microelectronics, will affect their members and organisational structure.

"The accelerated change which we foresee is not going to take place on the employers' terms alone, as happened in the first industrial revolution," said Murray, who accepts the thesis that our society is already in the shadow of the second industrial revolution.

Instead, Murray states that all changes must be wrought "on the basis of consent (of the workers and unions) to maximise the benefits and minimise the costs, and to ensure that the benefits are equitably shared in both national and international terms."

Government action by itself will not be enough, however, and this is a great challenge to the trade union movement which must, as the TUC Interim Report on Employment and Technology concludes, "develop its structures, policies and capacities to meet these changing demands."

One example of a union/employer confrontation over reductions in the workforce is that related to Philips Industries, the consumer appliance to computer company.

The European Metalworkers Federation, which represents seven million workers in 14 European countries, has criticised the Philips Group for its "cutbacks" of 24,000 workers over the last six years and claimed that an internal study suggests that further cuts of up to 20,000 jobs would take place

by 1991 in the Netherlands alone.

So in a bid to arrest what it sees as a threatening and serious situation, EMF affiliated unions, including the Association of Scientific, Technical and Managerial Staffs and AUEW/Tass, have launched a campaign to make the Philips workforce aware of the situation.

"We are seeking to achieve three common demands," said

Tim Webb, national officer of ASTMS and secretary of the Philips Industries Joint Council, "and these are security of employment; a reduction in working time; and improvements in general working conditions."

Clung the apparent reversal of intention by Philips management in Eindhoven, Netherlands, in not meeting an EMF delegation in 1975 to discuss

employment problems, Webb stressed that everything is being done to follow through with the agreed negotiating procedures in an attempt to correct this.

In response to the EMF criticism, a Philips spokesman said: "We have no plans at present to make any more cuts. The prediction of 20,000 less workers by 1991 was a 'worst case' report and was not based on any current plans that we have."

Tandem into Europe

FOR a new company, Tandem has done an exceptionally large proportion of its business in Europe, and has consequently decided to manufacture locally for the European market.

The plant is to be in Neufahrn, just north of Munich, and production is due to begin in September. The German market, where Tandem opened for business in Europe, has brought 27 installations comprising 76 processors; in the rest of Europe, 14 systems with 24 processors have been sold. Tandem's NonStop 16 system is sold with a minimum of two processors.

DIGITAL EQUIPMENT CORPORATION
RAPID RECALL AND THE PRESENT

there's one near you..don't miss it

ABOUT THE LSI-11/23
The LSI-11/23 has been developed from the famous PDP-11 family of microcomputers and replaces the LSI-11/2 as the most powerful microcomputer in the DEC range. The LSI-11/23 is as powerful as the PDP-11/34, yet it is contained on the same size board (2 wide) as the LSI-11/2. The LSI 11/23 is 100% software and hardware compatible with the LSI-11/2 and can be plugged in place of an LSI-11/2 in any system to provide a massive increase in performance.

THE SEMINAR PROGRAMME
The seminar is intended for engineers and managers who require a complete insight into the LSI-11/23, both from a hardware and a software point of view. Papers will be presented by the Digital Equipment Corporation and Rapid Recall.

BTI ADDS THE VALUE FIRST

Does your current system supplier offer you:

- 30% discount on two or more systems?
- Free programme development time on one of the in-house systems?
- A system expandable from 30 to 264 megabytes, disk storage?
- Multi-terminal facilities capable of handling up to 32 users simultaneously?
- Full 24-hour manufacturer maintenance—nationwide?
- A system with 60 megabytes of disk storage for less than \$37,000?

If he doesn't, then you should be talking to us because we do.

Improving your system tuning and capacity planning

By Nicholas Enticknap

IT is always a good idea when evaluating any new technique or product to get in touch with a few existing users to get the benefit of their experiences. With that in mind we contacted four installations which have in various different ways made use of performance measurement techniques.

The Bank of England serves as a good model of what can be achieved with the methodical approach. Two years ago, a decision was taken to set up a planning and performance group as a separate entity within the central software function. The group's brief was to accept responsibility for performance measurement and capacity planning functions, and also to investigate any new software which might be of value to the bank.

In this case the installation management already recognised the value of performance measurement. The effort put into it, however, tended to be rather sporadic, as the software staff were constantly being diverted on to whatever was the installation's most pressing development effort at the time. As a result they decided to form a dedicated group of three specialists.

This group approached their work cautiously, doing a careful evaluation of the hardware and software monitors available, and attending an Ecoma conference to find out what other people thought. They concluded that the best answer for the bank's particular circumstances was the purchase of a software monitor.

The installation is medium-

sized, with a configuration based on a two Megabyte IBM 370/158 and a two Megabyte 370/148, and a workload consisting of a mix of batch and online applications.

The performance group now does a regular in-depth investigation of the installation's performance about twice a year;

management as well. They take an interest in the trends depicted by the figures, and follow indicators such as the number of unscheduled IPLs, the proportion of jobs on IMS meeting target response time, and so on.

To summarise the efforts of the performance measurement team so far, the group have con-

ducted a decision to formalise the capacity planning operation. The initial emphasis was on software monitoring, but a few months ago the company decided to commission a study from an independent consultant, using a hardware monitor.

As Keith Batt of FCS puts it:

ONE user which does have a hardware monitor is British Leyland, which uses a Tsdata MS88. This was acquired in the context of a decision to centralise DP operations from five or six different data centres into a single centralised site. This, as might be imagined, was a highly complex operation, but the corporation achieved its target conversion dates ahead of schedule, according to British Leyland's Clive Tristram.

Tristram said: "If you're seriously into making money out of DP you've got to get into performance measurement," and gives examples of how the monitor facilitates fine tuning. The MS88 comes with a real time graphics display which

enables the operators to take in at a glance the state of the system.

The display might show, for example, that the CPU is being used 100%, the supervisor is similarly working 100% of the time, while one channel is being used 40% and the rest are idle. This would indicate a supervisor loop, and the operator would re-IPL the job.

Another way in which the British Leyland monitor has proved valuable is with the disc systems. As each disc controller can be accessed by up to four months' work, British Leyland reduced the spread to within 15%, with the least used being occupied 10% of the time and most used 25%.

each one takes three or four weeks to complete. In addition, a week-by-week analysis is performed. The data accumulated from this work is used both for tuning and for future capacity planning.

The emphasis of the work is on looking at where the CPU time goes. An important ratio studied by the bank is that between program time and CPU time; over the past two years this has shown an increase of about 10 per cent.

The results of the studies are followed not just by the technical staff, but by the installation

management as well. They take an interest in the trends depicted by the figures, and follow indicators such as the number of unscheduled IPLs, the proportion of jobs on IMS meeting target response time, and so on.

Another medium-sized installation which has adopted a rather different approach is Freight Computer Services, which runs a computing facility for the National Freight Corporation. The company set up a year ago to serve an installation based on dual Honeywell 68/10 processors.

The motivating factor here was the difficulty that had been experienced in predicting hard-

ware growth. This led to a decision to formalise the capacity planning operation. The initial emphasis was on software monitoring, but a few months ago the company decided to commission a study from an independent consultant, using a hardware monitor.

As Knight says, that kind of operation puts a premium on reliability, and the best way to achieve that is to resolve performance problems before they reach significant proportions. This requires constant vigilance, as well as considerable expertise to interpret the results obtained.

In the bank's case, Knight says that they have achieved excellent results, resolving all sorts of problems which were anything but obvious.

The bank's measurement work is all software based, using quite a lot of different packages. No matter how good they are, says Knight, none of them is ideal, so you need an in-house staff.

Sorry, but we've just made your computer out of date.

It had to happen. Technical innovators like Sperry Univac can't sit still. And if your business is going to keep moving, you can't afford to either. So for both of us, the introduction of the new 1100/60 mainframe series computer is a big step forward.

The 1100/60 offers a new low cost entry point into the famous 1100 series. It is the first computer to have multi microprocessors and it is based on a single operating system that gives complete compatibility from the smallest 1100 to the largest.

This multi microprocessing will not only answer all your immediate computing needs, but will also be capable of keeping pace with any expansion your organisation makes.

Add to that the fact that the 1100/60 is incredibly compact for its capabilities, and that it is also very competitively priced, you'll see that it is essential for you to find out more. So write or phone the Marketing Director, Sperry Univac Centre, London NW10 8LS. Tel: 01-961-2110.

SPERRY UNIVAC
COMPUTER SYSTEMS
SPERRY UNIVAC IS A DIVISION OF SPERRY RAND LIMITED

LAST week we carried an article outlining the various computer performance measurement techniques a DP manager can adopt. Now Nicholas Enticknap (pictured left) follows up with a report of the experiences of four users who conduct regular performance assessments.

COMPANY NEWS

27% profit increase for Sperry

SPERRY RAND, whose subsidiaries include Univac, reported a massive 26.9% increase in profit over its previous financial year which ended on March 31. The figures were \$224.1 million compared with \$176.5 million.

Sales of \$4.179 million were 14.5% up on the previous figure of \$3,649.4 million. Fourth quarter figures were \$98.5 million profit on \$1,185.8 million sales. This was a 16.8% increase on the comparable quarter figures of \$99.4 million.

Perkin-Elmer upped its sales by 26% for the third quarter compared with the previous financial year. Profits were \$12 million on \$189.2 million sales compared with \$9.4 million on \$150.6 million in the previous period. This also represents a 40% increase in profits.

An increase from \$14,300,000 to \$16,175,000 for the first quarter of 1979 over the same period last year has been reported by Modular Computer Systems. However, net profits were down at \$300,000 compared to \$1,139,000 in 1978.

Digital Equipment sales for the quarter up to the end of March were \$405.9 million compared with \$374.8 million for the same quarter in 1978. Profits before tax for the comparable quarters were \$79 million and \$59.2 million respectively.

Sales figures for the two quarters were divided into equipment sales of \$355.5 million (\$295.4 million in 1978) and service and miscellaneous sales of \$110 million (\$79.3 million in 1978).

Computer Sciences accounts for the year ended March 31 stated sales of \$343.2 million with a profit before tax of \$38.1 million. Comparable figures for 1977/78 were sales of \$272.3 million and before tax profits of \$20.3 million.

The profits for the fourth quarter were reduced due to a \$1.9 million charge resulting from the withdrawal of its employees from Iran.

Four-Phase Systems reported sales of \$40 million and profits before tax of \$5.1 million for the quarter ending March 31. The comparable quarter in 1978 had sales of \$29 million with before tax profits of \$3.5 million.

Breaking the barriers of apartheid

"We recommend the adoption by all companies in the private sector of a Code of Employment Practice that will eliminate discrimination based on race or colour from all aspects of employment, including selection, promotion, pay, fringe benefits of all kinds, and training. This Code must not remain as pious words but must be a true instrument of change."

This is the gist of a statement that anticipated by nearly two years the South African Government's announced intention to end job apartheid.

Its joint sponsors were SSACOLA, the South African employers' federation, and the Urban Foundation - a body dedicated to improve the quality of life for all non-whites which is supported by substantial subscriptions from more than 100 large and influential local companies. The Code has been generally well accepted and is being actively implemented, according to a recent Foundation news bulletin.

Enlightened self-interest has put the major computer companies in the vanguard of the movement. For they are faced by an acute shortage of technical skills that threatens their development in a wealthy, sophisticated and expanding market. Well aware that white resources are inadequate to meet their needs, they have stepped up their effort to mine the rich seam of unexploited non-white talent.

IBM, for instance, will spend more than \$3 million on black education during the next three years, according to its 36-page "Special Report on South Africa" published late last year.

One project involves co-operation with the American Chamber of Commerce in South Africa and other US businesses to fund a five-year commercial high school for 600 students. This will also provide adult

evening classes in Soweto and act as a community centre.

Sperry Rand, parent corporation of Sperry Univac, in February 1978 announced a programme of "affirmative action" in support of the Six Point Plan. The action covers multiracial in-house training in literacy and in supervisory, clerical and workshop skills and will include financing attendance at external courses.

As far back as 1973, Burroughs was employing a significant proportion of non-whites without discrimination in a variety of jobs. It has continued ever since to expand the scope of that programme.

"One misconception IBM helped to blow sky-high is that some blacks whose cultures never included the use of mathematics, while able to fix machines, would probably not understand programming," says the company's "Special Report". The failure of its early attempts to teach Cobol to blacks was found to stem solely from lack of sufficient opportunity for hands-on experience.

The ambitious, comprehensive technical training scheme that ICL has now operated for over a year has also proved beyond doubt that a white skin is no prerequisite for successful computing, either in-house or on customer sites.

"Without the five 'graduates' from our multiracial training school we would never have got our Protea project off the ground," I was told by John Theobald, internal systems manager for International Computers SA (Pty).

Protea is the specification and design phase of a complex online system which will keep tabs on hardware allocation and order progress and will eventually be used company-wide.

"It is parent board policy to employ, in management as well

as technical positions, nationals of all the countries in which we operate," I was reminded by John Starkey, ICL's managing director in South Africa. "The fact that, like everyone else, we're badly short of skilled people is a further incentive. Don't imagine, though, we're in this for charitable reasons. We're determined to increase our present 34% market share (IBM has 33%) and this implies using only people who are at least as competent as any we employ in Britain."

"Personality is an important as technical ability, specially for those who will be working directly with customers," said John Brett, manpower development manager, architect of the multi-racial training programme and himself a South African, taking up the story. "Aptitude is only one of the wide range of assessment tests we use. Standards are never bent."

"For the first three courses we had a total of nearly 4,000 applicants," Brett continued. "Of these, we tested 842; 213 did well enough to go forward for personal interview; and 75 were accepted. Seventy-one of these completed the course, 10 dropped out or failed; 65 graduated. With a 91% pass rate — all

examinations are both set and marked by line managers — we believe our selection parameters are valid."

Only the number of whites was atypical, for it included four deaf mutes of whom three were not on the ICL payroll. Eight of the 36 are computer science graduates; six have relevant degrees in other disciplines; eight are undergraduates; the remainder are educated to matriculation or HNC standard. Three are destined for Unilever, itself a pioneer in non-white training in artisan and management skills but which sends some trainees to ICL. Two

will go to Indian Affairs. Twelve graduates are now working in various African territories. The others have been absorbed into ICL jobs that range from customer support to software design and the tailoring of package programs for local users.

The big question must be whether integration really works in practice. During my stay in South Africa, I took full advantage of many opportunities to mix socially, and uninhibitedly to question (without eavesdropping) men and women of every race. Alert to detect any sign of social strain, I could discover only total "colour blindness".

WHENEVER South Africa is discussed most people take up positions behind the barricades. Here LAURA TATHAM gives a personal view of the progress the republic is making to break down the barriers of apartheid.

Our picture shows Chief Gatshe, Buthelesi, chief minister of Kwazulu, presenting a diploma to Peter Onay, one of 32 students of all races who successfully completed ICL's second and third technical training courses. Watching is John Brett, manpower development manager for ICL (South Africa).

will go to Indian Affairs.

Twelve graduates are now working in various African territories. The others have been absorbed into ICL jobs that range from customer support to software design and the tailoring of package programs for local users.

The big question must be whether integration really works in practice. During my stay in South Africa, I took full advantage of many opportunities to mix socially, and uninhibitedly to question (without eavesdropping) men and women of every race. Alert to detect any sign of social strain, I could discover only total "colour blindness".

Magnetic tape from Control Dataset.

Because your major investment must deserve the major supplier.

It's no surprise that Control Dataset is the U.K. computer industry's leading supplier of magnetic media.

Main frame businesses know there are strong reasons for relying on Control Dataset. Such as the system/drive/head/media total technology capability of Control Data Corporation. The exclusive supply of CDC and ICL label products. And the backing of Britain's biggest sales and technical support force.

CD Alpha and Omega label and ICL label products are exclusively manufactured at Control Data's U.K. plant, allowing full control over production and simplifying delivery.

So rely on the leading brands from the major supplier. Call Control Dataset on 0438 8322 for all your magnetic tape requirements.

More than a Computer Company

Sperry Univac

BICC's Helen Little fights it out with Woolworth's Lindsay Kenworthy in the Ladies' hockey dribbling competition.

The Ladies' 800 metres steeplechase proved a popular venue with male supporters at the water jump. The object, though, was to get over with dry feet.

Spark of success for powermen

BRITISH Nuclear Fuels and Manweb powered through to the final of Computastars when they left the opposition behind with margins of 12 and 17 points respectively in the North-west heat.

Held at the Kirkby Sports Stadium, Liverpool, on Sunday, the 22 Mens teams were put into four groups with the winners going through to the heat finals.

As a result of ties, 12 teams made it with Manweb, the local electricity board, being the overall winner with 170.5 points and are pictured below. The events were discus, standing long jump, soccer penalties, short sprints and 200 metres sprint.

The Ladies will be represented by the British Nuclear Fuels team from Warrington (pictured below) who beat the Midland

Bank North-west Computer Centre's team into second place with 132 points.

Eleven Ladies teams entered and the winner was decided from the team with the best placings in seven events. These

were: shot putting, standing long jumps, throwing a cricket ball, netball shooting, dribbling a hockey ball, short sprints and the 800 metres steeplechase (pictured above).

Events in the Mens finals were: shot putting, dribbling a soccer ball, dribbling a rugby ball, squat thrusts and the 800 metres steeplechase. There was a secondary competition for runners-up in Round 1.

In the individual events, the Men fought a close battle with fractions of a point being used to decide placings in the final line-up. However, this did not stop Mike Guest of Littlewoods and Roy Watson of Woolworths being on 43.67.

In the Ladies individual events, the final placings were clear cut with Maureen Dooley beating Michelle Probert into second place.

Baldry

Barrie steps into breach

THE old Army saying about not volunteering for anything did not apply as far as Unilever Computer Services Ltd's Barry Baldry was concerned. Barrie, who had just flown in from Hamburg, was looking forward to a relaxing afternoon watching the competition. But on hearing that there was a shortage of marshalls, Barrie promptly volunteered to act as starter for the races.

Splash of colour on day's events

HIGHLIGHT of the day's competition must have been the steeplechase events which, at times, bore more relation to scenes from Monty Python than events run under the AAA rules.

In particular the Ladies' 800 metres proved a popular diversion for the men who crowded round the water jump. The object, in theory, was that the competitor should get over without getting her feet wet. At least three of the ladies just went over regardless, causing ripples on the water.

In the Mens 800 metres steeplechase, one of the runners turned the tables on his detractors. The competitor, who was too shy to identify himself, fell in and promptly started to splash water over those laughing spectators who couldn't run away fast enough.

There are just two more heats to go before the finals on Saturday September 29. The East Anglian heat will be held on Sunday, June 10 at the University Athletic Ground, Milton Road, Cambridge and there are 19 teams competing.

The Copthall Stadium Barnet is the scene for the big North Thames heat on Saturday, June 30 with 47 teams fighting for honours.

Computastars is sponsored by Computer Weekly in conjunction with Wright Air Conditioning.

TEAMS

Mens: Allied Bakeries 1 and 11, Liverpool; BICC, Liverpool; British Nuclear Fuels, Warrington; Data Logic, Manchester; Fraser Williams & Co 1 and 11, Manchester; Gemini Computer Services, Manchester; ICI (Local Govt), Liverpool; Initial Services, Manchester; Littlewoods, Liverpool; Liverpool Post, Liverpool; Management Control Systems, Manchester; Manchester, Midland Bank (NWCC), Boodle Parkin-Elmer Data Systems 1 and 11 and Woolworths, Rochdale.

Ladies: Allied Bakeries, Liverpool; BICC, Liverpool; British Nuclear Fuels, Warrington; Data Logic, Manchester; Fraser Williams & Co, Manchester; ICI (Local Govt), Liverpool; Littlewoods, Liverpool; Liverpool Post, Liverpool; Manweb, Manchester; Midland Bank (NWCC), Boodle and Woolworths, Rochdale.

RESULTS

Ladies team events: 1 British Nuclear Fuels, 132 points; 2 Midland Bank, 120.5; 3 Woolworths and Liverpool Post, 110.5 each; 4 Littlewoods, 8; Data Logic and 7 BICC and Allied Bakeries (joint placing).

Ladies individual events: 1 Maureen Dooley, Midland Bank, 54 points; 2 Michelle Probert, British Nuclear Fuels, 51; and, 3 Lindsay Kenworthy, Woolworths, 40.5.

Mens team events: 1 Manweb, 170.5 points; 2 Management Control Systems, 153.2; 3 Midland Bank, 135; 4 Littlewoods 11; 5 Data Logic; 6 Littlewoods 1; 7 Woolworths 1; 8 Initial Services; 9 Inland Revenue; 10 Gemini Computer Services and Woolworths 11 (joint placing); and, 11 BICC.

Mens individual events: 1 Mike Guest, Littlewoods 11 and Roy Watson, Woolworths 1, 43.67 points each; 2 L. Wise, Management Control Systems, 39.2; and, 4 Emyr Jones, Manweb, 35.5.

LEFT — was the luck of the Irish for Maureen Dooley who pipped Michelle Probert for the Ladies individual competition. Maureen, who works for the Midland Bank's North-west Computer Centre at Boodle, finished on 54 points while Michelle, who works for British Nuclear Fuels at Warrington, had 51.

RIGHT — the Manweb Mens team were clear winners in the team events on Sunday. They clocked up 170.5 points with second placed Management Control Systems on 153.2. The team — Paul Davies, Joe Norris, Emyr Jones and Mike Edwards — go through to the finals.

In the individual events Emyr, who works in Manchester, came fourth with 35.5 points.

LEFT — British Nuclear Fuels' Ladies team also takes the trip to Crystal Palace in September. The team — Mary Martin, Michelle Probert and Julie Wazowaty — amassed 132 points with the Midland Bank trailing in second place on 120.5.

RIGHT — fractions counted throughout the Mens individual events at Kirkby as the results were close. This did not prevent Mike Guest (left) of Littlewoods going with Watson of Woolworths & Roy Watson of Woolworths.

NEW TERMINALS FROM DIGITAL EQUIPMENT

In technical terms, they look very good...

VT100/132. New video terminals. Up to 132-column width. Line-drawing capabilities. Up to 9600 baud rate. Exclusive "Slow Scroll" readability. Self-test diagnostics. Most functions set from detachable (up to 2 m) keyboard. VT132 adds editing capabilities.

PDT-11 intelligent terminals. PDT-11 technology. Can be programmed, clustered, equipped with mass storage and used in synchronous or asynchronous networks. Shown is PDT-11/150 with floppy disk drive, intelligence and memory. Use with any keyboard terminal. Not shown: PDT-11/130 (with memory and tape storage), PDT-11/110 (intelligent terminal with memory), both incorporating VT-100 VTR/keyboard features.

LA34. Tabletop DECwriter, 3001 word 30 cps. Choice of 4 compressed fonts (10 to touch up to 16 1/2). Cartridge ribbon. Built-in Numeric pad option. Smaller and lighter than most standard typewriters, and just as easy to operate.

LA120. High-performance terminal. Print speed 180 cps, baud rate selectable from 50 to 9,600 baud. (More than 45 user-selectable features relating to printer and formatting). Character code compressed fonts (from 5.5 to 16.5 mm). Font size, tab margin and form length can be set at keyboard, stored for easy recall. Automatic self-test.

In human terms, they feel even better.

Suddenly, the broadest range of terminals in the industry has got even bigger.

Major introductions. New video terminals. New hard-copy terminals. A totally new family of programmable terminals (PDT-11).

Terminals you can quickly combine into a common communications network, because their control codes are all part of one carefully thought out intercompatible standard.

All offer a wide range of communications interface options. Customer-assignable function keys.

High commonality of parts, right down to standard IEC 436 line cord. All have switching regulators for quieter, cooler operation. And for neater, more compact styling.

Human engineering specialists have colour-toned

each terminal to blend compatibly with the modern office environment. Keyboards are standard typewriter layout, with keys finger-sculpted and position-identified to maximise acceptability by any keyboard operator. Operator status lights are standard.

Still, these new terminals only represent a part of the total terminal family we have to offer. And if you haven't yet found out the advantages of dealing with the industry's only true "one-stop" terminal supplier, perhaps now is a very good time to find out.

We'll be very glad to send you data on all or any of these new terminals. And if you want to know more about existing terminals, like the well-known LA-180 line printer for example, just tick the "basket" box, too.

Digital, I'd like your Components Group to send me data on:
New video terminals ☐ New hard-copy terminals ☐
New PDT-programmable terminals ☐ I don't know your full range... send me a complete basketful ☐

THE 3200 ELMER HAS ARRIVED

Perkin-Elmer opens the next chapter in computing history. With the introduction of the Model 3220 — first processor in the new Series 3200 — the second generation of SUPERMINIS makes its historic UK debut.

Highest Performance

Perkin-Elmer introduced the world's first 32-bit SUPERMINI in 1973. Now, with a background of over six years practical experience from more than 2000 installed systems worldwide, the second generation Series 3200 arrives as other manufacturers are just launching their first.

The Model 3220 has full 32-bit architecture, a data transfer rate of 8Mb/sec, MOS memory in 256Kb modules up to an ultimate 4Mb, memory error logging down to chip level, cache memory and 128 32-bit registers.

Lowest Cost

With all these features and many more, the Model 3220 costs less than many currently available 16-bit systems, a major cost breakthrough. For the first time, this brings within economic reach of a wide range of users the speed, accuracy, power and I/O handling capacity normally associated with 'mainframe' computers.

Mature Software

To match the most advanced hardware, Perkin-Elmer 32-bit software has been refined and proven where it counts — in the field. This powerful software includes OS/32, a real-time, multi-tasking operating system, together with a host of language processors and utilities, including COBOL, globally optimising FORTRAN

VII, BASIC, CORAL 66, ITC transaction monitor and OS/MTM for multi-terminal program development facilities.

The 3200 Team

Perkin-Elmer, a Fortune 500 company, is world-renowned as a major manufacturer of high-technology optical, instrumentation and data processing products. The Model 3220 SUPERMINI is the latest evolution in the company's commitment to industry leadership and innovation. It is backed by years of field experience, fully-proven software and a team of dedicated professionals committed to making your installation a success.

Find out how the 3200 Team can help you. Return the coupon or call Jane Berry on Slough (0753) 34511.

I am interested in the Model 3220. Please let me have full information.

MYRIAD

IBM DOS/COBOL PROGRAMMER

IBM 370 → IBM 4300

NEAR WINDSOR

This position offers an excellent opportunity for the career-minded programmer to utilise their IBM expertise and progress their career development within an organisation committed to an extensive and continued investment in new IBM hardware.

The company operates a countrywide distributed processing network for which further systems development projects are planned.

The successful candidate will perform a key role, offering a sound IBM DOS and COBOL technical background, with responsibility for enhancing software technical development within the installation.

Experience of CICS and DL/I is a valuable asset. However the person appointed can look forward to receiving training enabling them to strengthen their technical knowledge.

c £8,000

A varied career is offered moving either to a more commercial systems and programming position or to further enhancement of the technical role.

The Company is a household name in the home entertainments industry and is a fast expanding member of an international group. The benefits package is very competitive and includes a substantial discount on company products and a pleasant working environment. The excellent salary offered is an indication that this position will provide a real career move for the progressive-minded programmer.

Ref. NW2/0706/CW

NEW IBM INSTALLATION ANALYST/PROGRAMMERS PROGRAMMERS

N.W. LONDON/MIDDX.

TO £8,000

A major manufacturing and retailing organisation with outlets throughout the U.K. and Europe is seeking additional development staff to work on systems from feasibility to implementation.

This is an ideal opportunity to join a young department in which the successful candidates will be able to gain considerable experience of applications ranging from Production and Stock Control to Goods Distribution and Management Statistics.

The installation works to high standards and encourages the use of the latest techniques for which formal training is provided.

Candidates should have a minimum two years' commercial experience encompassing design and specification writing. Applications from experienced Programmers who wish to progress to analysts will also be considered.

The Company operates a medium-size IBM installation with an on-line network. Conditions of employment and opportunities of career advancement are excellent. A first-class commencing salary will be offered.

Ref. N2/0706/CW

SALES EXECUTIVE

S. LONDON/KENT/
SURREY/WEST SUSSEX

c£10,000 + CAR

This vacancy presents an excellent opportunity for an experienced Bureau Sales Executive, or perhaps a sales oriented Analyst experienced in general Commercial Systems, to join one of the foremost service organisations in the country.

The person appointed will take over an established territory with an active client base and a good prospect list. The Company provide first-class support to their sales force who have the advantage of marketing extremely advanced and powerful products to numerous sectors of commerce and industry.

Experience of engineering or mailing systems would be an advantage. There is also a complete range of services from machine time to specialist systems and programming services.

The Company offers good conditions of employment and a rewarding career path leading to main line management.

App 1.50

MYRIAD CHIEF OPERATOR

N. LONDON

c.£6500

An excellent opportunity has arisen for an ambitious shift leader or chief operator seeking career advancement.

Leading a small team of operators the Chief Operator will be responsible for the day to day smooth and effective running of the operators department and maintaining an efficient service to users. In addition to ensuring maximum throughput is achieved in a multi-programming environment, the person appointed will be responsible for maintaining a high standard of operations expertise and provide technical guidance where necessary.

Candidates should have a sound operating background using IBM System 3 equipment and ideally have experience of working in a multi-programming environment using CCP utilities.

The company provides computing facilities for its outlets throughout the UK and Europe, and this position offers the opportunity of career advancement within a rapidly expanding organisation.

This is a non-shift position and is accompanied by good conditions of employment and an attractive range of fringe benefits. Ref. N1/0706

ATTRACTIVE
SALARIES

PUT SOME LEISURE INTO YOUR CAREER

Due to an increase in new developments throughout the Rank Organisation the following vacancies occur.

SENIOR ANALYSTS to £8500

Both a Senior Analyst and Systems Analyst are required with upwards of two years systems experience gained in a commercial sphere. Involvement with financial or on-line systems would be a decided asset. In return the Rank Organisation can offer you a challenging position developing systems for Butlin's, Pinewood Studios, or Central Services.

ANALYST/PROGRAMMERS to £7250

A good COBOL programming background allied to sound analytical skills could well gain you a senior position either with Butlin's Marketing Systems or in the Rank Leisure Services project team.

PROGRAMMER SPECIALISTS to £7250

The senior position of **PROGRAMMER DEVELOPMENT SUPERVISOR** has recently been created to implement the Systems Design Philosophy coupled with the training of programmers. If you have a minimum of 4 years COBOL gained with IBM 370's, and are a good communicator — then this is an excellent career step for you. In addition, the rare opening of **JUNIOR SYSTEMS PROGRAMMER** occurs. If you have good **ASSEMBLER** experience, then our clients can offer you the opportunity of moving into systems programming where you will be involved with operating systems, TP Monitors and new software developments.

These are all superb opportunities for you to put some leisure into your career and be well rewarded for your skills. So don't delay — contact us today.

Leisure is no longer simply a relaxation — today it is a major growth industry bringing to so many more people the opportunity to enjoy the fruits of their labours. Tomorrow the horizons are limitless with even the most restrained forecasts predicting longer leisure hours and a higher standard of living to be enjoyed. This is an opportunity for you to participate — and to put experience of the leisure industry into your career by joining Rank Management Services at Whyteleafe in Surrey. The work is interesting and varied, helping to solve problems for a wide range of leisure companies such as Rank Audio Visual, Butlin's, Top Rank Clubs, Rank Hotels. The working environment is first class and includes:—

- * **ATTRACTIVE SALARIES**
- * **IBM 370/138, DATA GENERAL minis and IBM SYSTEM 34's**
- * **BASED IN RURAL COUNTRYSIDE AT WHYTELEAFE, SURREY**
- * **FLEXITIME/PAID OVERTIME**
- * **DISCOUNT ON COMPANY PRODUCTS SUCH AS WHARFEDALE HIFI, PENTAX AND NIKON CAMERAS, TV AND RADIOS, GOLF CLUBS, HOTEL RESERVATIONS ETC.**
- * **USE OF COMPANY CARS**

Interested? Then either telephone to discuss the vacancies, or simply clip the coupon and we will forward an application form together with full details.

KUWAIT

: packages worth up to £35,000 p.a.

D.P. MANAGER
£15-17,000TAX
FREE

- + Bonus
- + Company Car
- + Fully furnished apartment
- + Schooling and Travel Allowance

KUWAIT has a hot but acceptable climate. Many facilities are available, including sports centres, English T.V. and reasonably-priced restaurants. The large ex-patriate country is socially active, there being theatre groups and frequent parties. Costs of food and household items for a family of 4 could perhaps amount to £3,000 per annum, including sometimes eating at restaurants, and there are few other essential costs. The apartments are built and furnished to a high standard.

THE COMPANY: Our client is a long-established and successful agent in the Gulf area for many major Companies, including Caterpillar and Volvo. As one of the largest organisations within the private sector in Kuwait, they offer secure employment and a most attractive remuneration package. This includes travel facilities which enable children educated in the U.K. to spend school holidays with their families. Local education is good up to the age of 11. The current DP Manager has decided to return to the U.K. after establishing a highly effective dual-processor, Burroughs 1728 computer installation during his 4 years in Kuwait. This equipment is currently used to handle parts inventory, with on-line enquiry facilities, and it is planned to develop further new systems in the near future. The Company therefore wishes to find a replacement for the DP Manager and to expand the DP Department by recruiting two additional Systems Analysts or Senior Analysts.

D.P. MANAGER

Responsibilities:
To manage all aspects of the current functioning and further development of the Data Processing Department and the services it provides, controlling 18 staff.

Required Profile:
Candidates who have spent less than eight years' in DP are unlikely to have the required depth of experience, which will include DP or Systems management and a good background in systems development and implementation. Knowledge of data communications would be useful.

SYSTEMS ANALYSTSaround **£11,000**TAX

Systems Analysts & Programmers

VIENNA

Our client has recently won a £multi-million contract to provide a radar and flight data processing system to cover the Austrian flight information region. The project is based on DEC computers using distributed real-time processing, communications and sophisticated peripherals. Several opportunities exist to join the team in Vienna in this absorbing and creative work. Contracts are for a minimum of 2 years and around 4-7 years real-time software experience is desirable. The package consists of a highly competitive salary together with attractive relocation conditions and such benefits as free education for children and free medical insurance.

**PERSONNEL ADVERTISING LIMITED**

Please write, giving a brief career history to David Macmillan, Personnel Advertising Limited, 22 Red Lion Street, London WC1R 4PH. All replies will be sent forward to our client unless we are instructed otherwise. Please quote ref. GR553.

**SAUDI ARABIA**

Our client, the Ministry of P.T.T. Riyadh, urgently requires following personnel for IBM 3031 computers:

- **SYSTEMS ANALYSTS £27K P.A.**
Min 5 yrs. exp. in computer systems work
- **COMPUTER OPERATORS £20K P.A.**
Min 3 yrs. exp. as Computer Operator
- **UNIT SUPERVISORS £20K P.A.**
Min 3 yrs. exp. in data processing to include one of the following fields:
 - (a) Scheduling on I/O control
 - (b) Job set up or production control
 - (c) Operation, programming and interface

Above salaries are maximum depending on experience and qualifications.

ADDS (UK) LTD
A subsidiary of Applied Digital Data Systems Inc.

National Sales Executive

Train in the USA

for a
'Ground Floor' opportunity
in
Micro-Based Systems

Applied Digital Data Systems (ADDS) is the world's leading independent manufacturer of micro-processor based display terminals. **ADDS (UK) Ltd.** is the U.K. System division of the Company and over the last 2 years has established a sound user base of micro-processor based diskette computer systems with communication facilities. The company is now involved in a campaign of considerable expansion via a network of OEM distributors and large-scale end users.

A key element of this planned growth is the appointment of a sales executive, based in the company's new offices in

London

to take over complete responsibility for sales of the Regent 300 and ADDS System 76, to OEM Distributors and National Accounts throughout the UK. **This is a new appointment and represents an outstanding career opportunity for a salesman who is capable of operating independently.**

We are seeking an experienced sales executive with a proven record of sales success. Alternatively, we will consider applications from

Sales Support Analysts

with experience in pre-sale support of small business systems wishing to move into selling.

Total income package of

£13,000 + 2 litre Car

will be paid, of which 50% will be basic salary. A guaranteed income of up to £10,000 will be paid in the first instance.

Internal Consultants

Computer Systems Audit/Security.
London based, to £10,500 + car

These vacancies arise through promotions within a function recognised as providing excellent and varied prospects of career advancement. Our client is a multinational manufacturer and distributor of business equipment and supplies. Successful candidates will be members of an internal consultancy team providing international management at all levels with a professional appraisal of operations methods

and an assurance of the integrity of current systems. Candidates, probably 27-35, must be graduates with at least 3 years in EDP systems management, ideally with IBM equipment. A full understanding of business problems associated with large scale systems development is vital. For one of the vacancies experience of security technology is preferred. There is about 30% travel, mainly overseas.

N.P.S. Lilley, Ref: 22134/CW

Male or female candidates should telephone in confidence for a Personal History Form to:

Assistant to Group Computer Controller

This post, in a major diverse international Retailing Organisation offers a complex technical and personal challenge to a highly motivated and intelligent graduate.

The work involves advising the Group's Parent Board and the Directors and Staff of Subsidiary Companies on matters concerning computers, telecommunications, office automation, micro-processors, systems, software and equipment acquisition and financing strategies.

Applicants of either sex, between the ages of 24 and 32, should possess a science degree and ideally have written tele-processing software for mini/micro computers in a commercial environment, and should now be interested in extending and applying their skills and experience in a profit-conscious organisation.

Adaptability, good communication skills, perseverance and the ability to work successfully either singly or as part of a team are more important than paper qualifications.

Salary will be negotiable around £8,000 p.a. plus Company car and large Company benefits, including subsidised restaurant, B.U.P.A., 4 weeks' holiday, etc. The position is London based but substantial travelling is involved. Assistance with relocation will be given where appropriate.

UNIVERSITY OF
EDINBURGH
DEPARTMENT OF
COMPUTER SCIENCE

1 LECTURER
1 COMPUTING
OFFICER

Applications are invited for a post as LECTURER in the Department of Computer Science. Specialisation required: hardware design and implementation. Salary scale from October 1979: £4325-5962 (plus superannuation), with placement according to age, qualifications and experience. The successful candidate will be invited to take up the post as soon as possible after 1st July, 1979, and not later than 1st October, 1979.

Applications are also invited for a post as DEPARTMENTAL COMPUTING OFFICER to develop and maintain departmental software. Some hardware experience an advantage. Salary scale from October 1979: £4325-7821 (plus superannuation), with placement according to age, qualifications and experience. The successful candidate will be invited to take up the post as soon as possible after 1st July, 1979, and not later than 1st October, 1979.

Further particulars of both the above posts may be obtained from: The Secretary, University of Edinburgh, Old College, South Bridge, EDINBURGH, EH8 8YL.

Applications by letter, including a curriculum vitae and the names of two referees, to be sent to the Secretary.

TO £7,500 SYSTEMS PROGRAMMERS INTERNATIONAL BANK — EUROPEAN TRAVEL

- ★ Low cost mortgage facilities
- ★ Low interest personal loans
- ★ Profit sharing
- ★ Free lunches
- ★ Free life assurance
- ★ Interest free season ticket loan
- ★ Non-contributory pensions
- ★ Free BUPA
- ★ Over 4 weeks' holiday

This small London-based team is responsible for six computer installations located in major cities throughout Europe. The team provides technical support to these installations on a planned and trouble shooting basis. Responsibilities also include: future hardware evaluation, computer performance evaluation, software evaluation and the co-operation of systems software enhancement. Experience in Operating Systems is extremely important and any knowledge of mini-computer systems would be useful although by no means essential. In fact candidates with a good knowledge of computer systems software could find these positions extremely interesting with a wide and varied range of responsibilities. The positions offer an excellent income package, coupled with a progressive promotions system, based on merit. European travel will form an integral part of the job but would not be in excess of 10% to 20% of the time. It is also relevant that the organisation offers an outstanding package of fringe benefits.

Computer Services & Recruitment Consultants

COMPUTER OPERATIONS SUPERVISOR-MANAGER/ESS

We are an old-established group in Shopfitting, Architectural Metalwork, Jewellery Services and Industrial Doors.

We have completed Stage II of our Burroughs B.800 installation and have been live on B.M.S. order processing for 15 months and Comaus III for 5 months. We have CMS fixed desk on order for delivery later this year and we need a computer room supervisor to take over the day-to-day control of the computer room and to see in CMS under the control of the Chief Financial Controller. There is a computer room staff of four.

Ideally you should be used to working with Burroughs hardware and software and dealing with the day-to-day problems of both. There is plenty of scope for advancement as our "pencil-in plans" envisage an on line processing of our Bristol-based companies data next year.

Benefits include 4 weeks' and 2 days' holiday, pension scheme, free life assurance, sick pay scheme, travel allowance and subsidised canteen. Salary is negotiable as we are prepared to pay the right price for the right person.

Please write, giving details of career, salary, etc., to:

Personnel Manager
POLLARDS OF LONDON LTD.
Highbury Grove, London, N.6
Tel: 01-226 3355

Management Services Manager

JCB, Europe's leading manufacturer of earthmoving equipment, require a data processing manager. His/her responsibility will be to control a department embarking on an ambitious 3 year Development and Implementation Plan.

The D.P. development will be centred around two large Honeywell L64 D.P.S. Systems with a communications network encompassing all areas of the group.

Major systems activities include Database using IDS, shop floor monitoring and control, Real Time Systems, an 80 Terminal Network, On-line Order Processing and some overseas responsibilities.

The successful applicant will possess a demonstrable record of achievement in an operational Systems Management in an established On-line/Real Time environment spanning at least 5 years in the Computer Industry, and ability to motivate and control all levels of Data Processing staff. Project Management and similar capabilities are an essential requirement.

Attractive conditions including generous salary, excellent fringe benefits and relocation expenses to a rural area in North Staffordshire.

JBA

GERMANY

CONSULTANTS

Salaries £18,000-£25,000

Medical Systems

At least two consultants are required with a background in clinical laboratory systems, especially pharmaceutical. A sound knowledge of processes and system configuration (hardware and software) is more important than specific machine experience.

Multi-processors

Several senior people are required with experience of multi-processor and system architecture design. A good knowledge of operating systems and associated software features is desirable.

16-bit machines.

Our client requires at least four senior consultants with network design experience and database development on 16-bit machines.

IMS expertise plus TCAM/VTAM

JBA is interested to talk with any senior people with detailed knowledge of IMS administration, installation or generation and maintenance. Also several senior positions are available for TCAM, VTAM, BTAM, or NCP specialists.

Word Processors

Two vacancies exist for senior word or table processor design specialists who have IBM/XT micro development experience and an intimate knowledge of latest technology.

Contact: Mike Creamer

For further information on any of the above vacancies, please contact the appropriate consultant. If your qualifications do not match the above positions but you are seeking other opportunities please contact us anyway.

Applied Computing and Software Limited **ACS**

COMPUTER MANAGEMENT — MIDLANDS

MULTI £M GROUP TO INSTALL IBM REAL-TIME SYSTEMS Two Management Opportunities — Negotiable Salaries, Cars, Normal Benefits

Our client, is an international, U.K. based group of companies with an annual turnover in excess of £250M. Operating companies are located throughout the U.K. and commitment to expansion is likely to further increase an established European involvement.

The growth and success of the group, has led to a review of data processing policy resulting in a decision to install Real Time Systems based on the latest IBM hardware and software. The existing computer facility, a subsidiary company, will be expanded to meet the increased demand and two key Managers are needed as follows:

MANAGEMENT SERVICES MANAGER

This appointment will provide undoubted challenge, job interest and good career potential. It will appeal to an energetic, resourceful and mature individual, aged 35-45, a Manager used to working within a group structure and with a ready grasp of the business implications of computerisation. Departmental management duties will be widespread and all embracing, whilst previous experience of Real-Time applications is essential based on IBM hardware. A discipline in addition to data processing will be welcomed as the appointment could lead to a board position in the subsidiary company.

Both of the above positions will be based at our client's headquarters in the Midlands, within easy reach of town, country and moderately priced housing. Salaries will be negotiated at realistic levels, commensurate with the importance of the positions. Company cars are available and relocation expenses will be met where necessary. Please ensure that written applications are in sufficient detail to enable an interview decision to be made.

COMPUTER OPERATIONS MANAGER

A dedicated computer professional with drive and enthusiasm, is required for this position, probably aged 30-35. A detailed understanding of Real-Time operational problems is mandatory and previous experience of IBM Hardware is expected. This is a key role in developing and building a strong team, which will be able to provide a high level of service to users in a critical area. Apart from purely technical matters, responsibility must be assumed for instituting operational standards, training, advice on hardware budgets, recruiting and staff assessments.

Positions open to male & female applicants, please telephone (24 hour service) for initial discussion or write to address below. QUOTE REF. CW145-9D

A.M.P. HOUSE, DINGWALL RD.
CROYDON, CR9 2AU

Project Manager

from £7000 negotiable Cheshire based

Have you got the drive to attack a new market?

If you've the experience we're looking for, you'll already know Dataskil is one of Europe's leading software houses. What you probably won't have heard is that we've recently created a General Systems Unit at Wilmslow, Cheshire, to obtain systems, programming and operations business on non-ICL machines.

New Market

The opportunities are enormous. And we mean to exploit them to the full. We plan to build the Unit into a major market force, designed to provide consultancy studies, general systems and programming, and staff hire across a controlled sector of non-ICL hardware.

How you fit in

We're looking for a dynamic professional with 8-10 years

computer experience of at least one non-ICL mainframe (preferably IBM or Honeywell). You're likely to already be a Project Manager, or with the potential to handle responsibility at this standard, and have had involvement in at least one major project at management level.

Although the Unit is based in Wilmslow, it covers the area North of Birmingham and South of Scotland, and you'll be involved in areas as diverse as planning, marketing, interviewing, staff management, contract negotiations and presentations. At times the hours will be tough and demanding, but if you're looking for something more than a desk-bound 9-5 routine, you'll find the rewards more than outweigh your commitment.

The salary is from £7000 negotiable, with expenses and eligibility for our 1979 Productivity Bonus Scheme.

Ring Henry Cohen, Manager, General Systems Unit, Northern Region, on Wilmslow (0625) 532631 ext. 35, or write to him at Dataskil Limited, St. Ann's House, Alderley Road, Wilmslow, Cheshire, SK9 1HQ. Please quote reference CW1401.

The Computer Professionals

City of
Manchester

Treasurer's
Department

Computer Programming / Auditor

£4,773-£5,668
(including £312 p.a. supplement)

Applicants should be experienced in writing interpretation and other programs. Experience in using COBOL would be an advantage. The person appointed will be one of two people employed solely on computer audits. An ICL System 4/220 computer is used which is to be replaced in about two years.

The post offers good working conditions, a 5 day 24-hour week with flexible working hours system.

The City Council operates a Union Membership Agreement under which a new employee is required to become a member of a recognised Union. Application forms from the City Treasurer, P.O. Box 314, Town Hall, Manchester, M2 2JH, quoting reference GA/RL or telephone 061 220 3327 (4-5 PM). Applicants requiring further information about the post may discuss them with the Chief Internal Auditor M.J.A. Mason on Ext. 2605.

Closing date 26th June 1979

COMPUTER SERVICES ENGINEER

Bristol Aerojet Limited are designers and manufacturers of rocket motors, rocket vehicles and underwater systems. Against a background of long-term government contracts we are continuing to expand and currently have a vacancy for a Computer Services Engineer.

Duties will include the maintenance of existing computer systems and the development of programmes for new ones plus giving assistance and advice to time sharing terminal users.

Applicants should ideally be between 25 and 35 and have a strong mathematical and computer environment background. A knowledge of statistics would be an advantage.

The Company is pleasantly situated on the Avon/Somerset border a few miles from the sea, the Mendips hills and Junction 21 of M5. Working conditions are excellent and salary is negotiable. In addition, a productivity scheme is in operation.

Checkout the new leaders— literally!

Tesco have one of the most up-to-date computer installations in the country: the IBM 3032, plus laser printers, plus Mass Storage System, plus a lot of other exciting peripherals.

What's more, we're using this hardware effectively, devising programmes that actually work in management terms and lead to greater efficiency, more rapid reaction to market and marketing factors and greater profitability all round. And this, after all, is what computers are all about.

We are now looking for two reasonably experienced people to overlook our systems, with varying degrees of responsibility.

As a **Systems Assurance Officer**, you would be directly involved in ensuring all programmes currently under development are secure and efficient, and be responsible to see that interface and recovery/restart procedures are adequate. To do this, you'll

need solid experience in programming and program design, preferably including on-line and database facilities.

As a **Systems Audit Officer**, you'll be doing much the same job, but on an on-going basis, acting as advisor to Development Teams on Audit requirements at all stages of development. But you will also be responsible for seeing that management controls are regularly reviewed, and that the physical environment of the hardware itself is also adequately controlled. This obviously needs a wider experience, including systems analysis.

If you want to work for the new leaders in computer applications in either of these two positions, you'll need to be of graduate calibre. Convince us of that, convince us of the fact that you are seriously seeking more responsibility than your current position can offer and you're on the way to join

the new leaders.

We, in our turn will offer realistic starting salaries and full fringe benefits, including re-location expenses to the beautiful Lea Valley area where necessary.

For more details and an application form, contact Fred Rayers, Tesco Stores Ltd., Tesco House, Delamare Road, Cheshunt, Herts. EN8 9SL. Tel: Wattham Cross 32222.

SPECIALIST RECRUITMENT CONSULTANTS

TRAINING MANAGER

(PART OF U.K. MANAGEMENT TEAM)
MAJOR MANUFACTURER
WEST LONDON

£10,000-£12,000 p.a. (Higher for Telecommunications experience)

This key position is immediately available and we feel it presently represents one of the best opportunities in its field. Based in West London, the position is primarily responsible for Customer Training, Internal Induction Courses, Sales Training Courses, and running the Company's Users' Group. The present facility consists of approximately ten staff and a budget of over £250,000 with a planned growth to thirty staff and a £750,000 operating budget within 2½ years.

Clearly, since the position is part of the U.K. Management Team, we seek a high calibre individual to fill it. With direct responsibility in the areas of people, resources, administration and business and a reporting structure both locally and into Europe, the personal qualities and track record of the successful candidate will be outstanding. An excellence in communication, appearance, management, negotiations, judgement and principles is a prerequisite.

There is a detailed job specification available reflecting the importance our Clients attach to this position and interested candidates should telephone the Advertising Director, BOB BOWER, as soon as possible to arrange for a mutual interchange of information. Since there is a fair degree of urgency candidates are requested to telephone in the first instance.

MAJOR IBM SYSTEM 34 DEVELOPMENT PROGRAMME

- 14 Subsidiary Companies to be Computerised (UK & EUROPE)
- Manufacturing Environment using IBM's MAAPICS System
- Applications: Order Entry, Inventory and Production Management
- Occasional Overseas Travel (8-10 weeks p.a. with Weekend returns)
- User Company Contact - Liaison Position of Full Responsibility

Our Client, the European Headquarters for an American multi-national manufacturing corporation listed in Fortune's Top 500 with an annual turnover exceeding \$750M and known for their high technology products in the hydraulics field, require Programmer/Analysts with at least one year's RPG II programming experience to join a small project team involved in the development, extension and modification of IBM's MAAPICS system to encompass the above listed applications at their Watford offices with subsequent commissioning of IBM System 34 computers at 14 of their subsidiary companies located throughout the UK and Europe.

Applicants with sound RPG II and perhaps knowledge and/or experience of IBM System 31 and MAAPICS must be able to organise user companies in the implementation of their computer facilities and systems. Your duties will include site preparation, files preparation, staff training, systems cut-over, and all liaison as necessary during the implementation period. Reporting to the European Data Processing Manager, you will have complete autonomy and must be able to cope with all aspects of establishing an IBM System 34 facility.

RPG II Programmer/Analysts wishing to further their career on IBM System 34 and possible System 38 in the future, and who are willing and capable of accepting responsibility at a senior level should contact Jim Fort immediately for complete details and a confidential interview with the client.

GROUND-FLOOR OPPORTUNITY

for young, bright, energetic and ambitious

PROGRAMMER

for an expanding International Communication Company for its London Office.

The company is in the process of installing a sophisticated communication network between 3 continents based on IBM Series 1.

Suitable applicant should be prepared to train (outside the U.K.) by software house, implementing the programmes with the view of ultimately being able to maintain and change programmes independently.

Previous IBM Series 1 EDX experience is an asset but not a must.

Good salary, prospects of fast promotion, long-term potential to become head of department. Travel abroad and other fringe benefits offered to the right applicant.

SOUNDS GOOD?

Software Development Opportunities

Team Leader Two Senior Programmers Two Programmers

Racal-Milgo Limited, already the world leader in the Data Communications field, is actively engaged in developing a number of exciting and progressive new products which will maintain its market position in the 1980s.

As a member of one of our small expert teams you will be deeply involved in these important developments. A comprehensive training in modern Data Communications systems technology and protocol techniques, including X25, will be given to you. Contact with microprocessors is inevitable.

For your part you will be offering PDP Macro II experience and you will have used one or more high-level languages. Any systems programming will certainly count to your advantage. These positions offer first-class opportunities for directly entering one of

the most interesting areas of the communications revolution and will command an attractive salary and benefits package.

Write, in full confidence, with brief details to:

SURREY SYSTEMS MANAGEMENT

Current availability of low cost hardware and the microprocessor revolution in text handling, distributed processing, inter-office message switching and the like, has encouraged our client to establish an ambitious, but realistic modernisation program throughout their widespread organisation.

The company, solidly based in the Insurance Industry, are already experienced computer users, but the recent rapid growth and development of the data processing function, creates the need to appoint two senior people in the systems area.

SYSTEMS MANAGER

c.£10,000 + Car

The successful applicant will be personable and mature, aged 35-45, with a good knowledge of general insurance, preferably from the broking aspect. There must be evidence of a proven track record in the systems area, management experience and an ability to achieve results. An appreciation of current IBM hardware and software facilities is necessary to ensure a close relationship with the technical section.

Systems are specifically user driven, both in respect of improving management productivity and in the automation of clerical functions, therefore, a sound business awareness is extremely important in the daily control and direction of the systems department.

PROJECT LEADER

£8-9,000

He/She will have many of the attributes required of the Systems Manager, ideally with a similar background of general insurance related systems, and again preferably from the broking side. The position requires a deeper understanding of systems technicalities, but business skills and user empathy are equally important, coupled with enthusiasm and a sense of urgency to complete projects. Previous experience of project leading at analyst level will be expected, particularly in an installation based on IBM hardware.

Our client is intent on expansion and efficiency throughout the group. The commitment to lead their field, will mean a high level of challenge and job interest for many years.

We would stress again, that candidates for both positions must relate closely to the user departments in developing and implementing the new technology.

Written details must provide sufficient information for interview assessment to be made.

Positions open to male & female applicants, please telephone (24 hour service) for initial discussion or write to address below. QUOTE REF. CW146-9H

VICTORIA APPOINTMENTS LIMITED

OPERATIONS MANAGER

Salary c. £6,500

Our Client, a leading company in the Transportation field, is looking for an Operations Manager. It is anticipated that the successful candidate will be aged over 25 years and educated to 'A' level or equivalent. He/She must be able to demonstrate organisational abilities and have strong supervisory and management experience, preferably gained in a mainframe/communications environment.

The Department has a large mainframe supporting a sophisticated communications network offering scope for a self-starter able to keep abreast of new techniques to use his initiative in this progressive installation.

Applications in writing only, with full personal and career details, should be marked Ref. 01679 and addressed to:

MANAGEMENT AND EXECUTIVE SELECTION WORKING FOR YOU

Suite 201-6, Albany House, 324 Regent Street, London,
W1R 5AA

UMRCC

University of Manchester
Regional Computer Centre

Director: Professor Gordon Black

Expansion creates further opportunities to join one of the foremost computer centres in Europe

UMRCC is a national centre providing a general service to over thirty universities in the United Kingdom. This is currently based on two Control Data 7600 computers each front-ended by an ICL 1900. A CDC CYBER 72 provides an interactive service to Manchester users, accessed by over a hundred terminals.

SYSTEMS GROUP

OPERATING SYSTEMS

Lead a team responsible for the development and support of the GEORGE 3 operating system on the ICL 1900 and 1904S computers. For this senior appointment you should have in-depth knowledge of GEORGE 3 and preferably experience in leading a team of programmers. If you have less experience you could be a member of the team. Current projects include the implementation of the North West Universities Network System (NANET), the investigation of Vesta subsystems, and replacement processors. Ref: 124/79/CW. The salary will be on the scale £4,232-£7,145 p.a. or £5,896-£8,452 p.a. depending on experience. The scales will increase to £4,333-£7,321 p.a. and £5,997-£8,552 p.a. in October, 1979.

COMPILERS

Help to provide, maintain, and support a wide range of compilers. You should have experience of compiler and systems programming, together with a knowledge of FORTRAN and one other high level language. A knowledge of CDC and/or ICL 1900 systems would be an advantage. Ref: 125/79/CW. The salary will be on the scale £3,889-£6,108 p.a. which will increase to £3,775-£5,355 p.a. in October, 1979.

RESOURCE CONTROL SYSTEMS

Assist in the provision of resource control software. The successful candidate will be working with a team responsible for the development and support of software to monitor and control computer resources allocated to users. You should have experience of program development from design to implementation. Ref: 126/79/CW. The salary will be on the scale £3,889-£6,108 p.a. or £4,333-£7,145 p.a. depending on experience. These scales will increase to £3,775-£5,355 p.a. and £4,333-£7,321 p.a. in October, 1979.

COMMUNICATIONS SOFTWARE

Develop software for packet switching to link the ICL 1900 computers to the Post Office FDS via a GE 4070 processor. You should have a successful record of implementing software systems and the ability to lead technical development is essential. Experience of real-time systems or computer networks would be an advantage. If you have less experience you could join the team at a lower grade. Ref: 127/79/CW. The salary for the senior programmer will be on the scale £3,889-£6,108 p.a. which will increase to £3,775-£5,355 p.a. in October, 1979. The salary for the programmer will be on the scale £3,889-£6,108 p.a. or £4,333-£7,145 p.a. depending on experience; these scales will increase to £3,775-£5,355 p.a. and £4,333-£7,321 p.a. in October, 1979.

INTERACTIVE SYSTEMS GROUP

INTERACTIVE SYSTEMS

Join a new interactive systems group. Two programmers will be appointed to work with a team responsible for the development and support of the service based on the CYBER 72 running under the MVS operating system. Current project areas include system performance monitoring and analysis, filestore management, and planning future enhancements. You should have some experience of systems programming, preferably on Control Data computers. Ref: 128/79/CW. The salary for both posts will be on the scale £3,889-£6,108 p.a. or £4,333-£7,145 p.a. depending on experience. These scales will increase to £3,775-£5,355 p.a. and £4,333-£7,321 p.a. in October, 1979.

USER SERVICES GROUP

APPLICATIONS SOFTWARE

Help to support and maintain a wide range of applications software. The principal activities of the successful candidate will be concerned with software provided to users at Manchester who have access to the local interactive service, currently based on the CYBER 72. You should have a sound knowledge of FORTRAN, and expertise with graphics, statistical or engineering packages would be an advantage. Ref: 129/79/CW. The salary will be on the scale £4,333-£7,145 p.a. which will increase to £4,333-£7,321 p.a. in October, 1979.

INFORMATION AND DOCUMENTATION

Work with a section which produces manuals describing the computer services offered to our 10,000 users. Particular emphasis will be placed on documenting facilities available on the local CYBER 72 interactive computer. The appointee will also be expected to take part in the advisory service provided to those users from the University of Manchester. Ref: 130/79/CW. The salary will be on the scale £3,889-£6,108 p.a. which will increase to £3,775-£5,355 p.a. in October, 1979.

LIAISON AND TRAINING

Join a team which maintains contact with representatives at the fifty user sites and departments that receive a computing service from UMRCC. The person appointed will be providing and helping users with a wide range of backgrounds and expertise. You should be interested in dealing with people and have a knowledge of some or more high level programming languages. Ref: 131/79/CW. The salary will be on the scale £3,889-£6,108 p.a. which will increase to £3,775-£5,355 p.a. in October, 1979.

OPERATIONS GROUP

COMPUTER MANAGER

Supervise the day-to-day running of the large batch systems. The person appointed will be responsible for the standards of systems, the production of records of equipment performance, and for the control of consumable materials. An essential part of the job will be liaison with systems programmers and engineering maintenance, and supervision of operations staff through intermediate supervision. Previous management experience at a large ICL or CDC installation would be an advantage. Ref: 132/79/CW. The salary will be on the scale £4,333-£7,145 p.a. which will increase to £4,333-£7,321 p.a. in October, 1979.

TECHNICAL SERVICES MANAGER

Be responsible for the supervision of the CYBER 72 interactive systems and the staff who run them. The successful candidate will be expected to play a leading role in the installation and introduction of new facilities to the service. In addition, a large magnetic tape library and other off-line facilities will be under the control of the system. Previous management experience in these areas or technical qualifications, and experience at a high level would be an advantage. Ref: 133/79/CW. The salary for both management posts will be on the scale £4,333-£7,145 p.a. which will increase to £4,333-£7,321 p.a. in October, 1979.

Benefits include a good pension scheme and generous holiday entitlement. If you would enjoy the challenge of working in a stimulating environment, with the prospect of a rewarding career, send for further information and application form (returnable by 28 June, 1979) to the Registrar, University of Manchester, Oxford Road, Manchester M13 9PL, quoting the appropriate reference.

We're looking for...

FALMER Jeanius

Falmer Jeans is one of this country's most successful manufacturers of leisure wear, and as part of our continued programme of expansion we have the following vacancies in our newly-established computer department based in Rayleigh, Essex.

2 PROGRAMMER ANALYSTS

c £5,500 p.a. Minimum

A Burroughs B1830 is currently being installed to handle all applications from Order Processing through Production Planning, Stock Control and Accounting. We now require two Programmers to design and implement the next phases of this development which will involve a considerable amount of liaison with user departments.

All systems will use the latest developments in on-line data base techniques using Cobol as the application language. Suitable experience in all these areas will naturally be an advantage.

COMPUTER OPERATOR/ TRAINEE PROGRAMMER

c £3,500 p.a. (No Shifts)

For this position we require a young person with the experience and technical ability to exploit the potential of a sophisticated on-line computer system. It is planned that full training on Burroughs hardware will be given, leading on to further courses covering Cobol programming and database techniques.

FIPE REGIONAL COUNCIL

FINANCE DEPARTMENT SYSTEMS AND PROGRAMMING SECTION SYSTEMS ANALYST

Salary grade: A.P. V £8568/£8698 (including supplements)
Due to internal promotion a vacancy exists for a systems analyst to join one of our Project Teams.
Applicants should have at least 2 years' programming experience and systems design experience. They should be able to demonstrate an ability to work in a team environment. A professional qualification would be of advantage.

ANALYST/ PROGRAMMERS

Salary grade: A.P. £4820/£5403 (including supplements)
An opportunity presently exists for two Analyst/Programmers to join the Systems and Programming Project Teams.
Applicants should have at least three years' experience of programming in COBOL and be able to demonstrate an ability to carry out systems analysis in a team environment. A professional qualification would be of advantage.

COMPUTER PROGRAMMER

Salary grade: Tech. D (presently under review) £4248/£4773 (including supplement)

Due to an internal promotion a vacancy exists for a computer programmer to join one of our Project Teams.

Applicants should have at least 2 years' experience of programming in COBOL. A wide variety of local authority work is undertaken on behalf of the Regional and three District Councils. Career prospects are excellent.

Placing according to experience on salary grades. Conveying directly or indirectly will disqualify.

Application forms and Job Specifications for the above posts from Regional Personnel Officer, Fife House, North Street, Glenrothes, Fife Tel. Glenrothes 754411 Ext. 245/6, to whom completed form should be returned not later than 15th June 1979. Please quote Reference RP/48/87/CW.

G-PLAN PROGRAMMER c. £5,500

A vacancy for a Programmer has arisen with E. Gomme Ltd. who design and manufacture G-Plan furniture.

The position involves membership of a small team writing application programmes in PL/1 for both batch and T.P. (SHADOW II) systems. Program development is done on-line using SHADOW/QUOTA. The successful applicant will be encouraged to develop system programming expertise.

The installation is A256K IBM 370/125 with 3330 disks, tape and VDUs, and further expansion is planned.

Applicants should preferably have at least two years' experience in PL/1, RPGII, SHADOW II or System programming experience would be an advantage.

The Company is a first-class employer and will, where appropriate, assist with removal expenses.

Write to:

Company Personnel Manager
E. GOMME LIMITED
Spring Gardens, High Wycombe, Bucks.

Real-Time Coverage Programmers

Further expansion of BABS already one of Europe's largest real-time computer systems offers an opportunity for men and women to gain valuable experience in large real-time systems control, database management and operations. Salaries will reflect qualifications and experience and starting pay will be up to £5,500, with excellent opportunities for progression to more senior positions with salaries of up to £8,000 and beyond.

British Airways' real-time computer systems provides world-wide, round-the-clock Passenger Service System handling approximately 2 million enquiries a day from over 300 on-line terminals. The system is currently based on Amdahl 470/V7 CPU's under the Airline Control Program (ACP) operating system.

Coverage programmers work closely with all programming groups, operations and engineering staff to control the system involving performance monitoring, system testing, establishment of cutover procedures, and producing utility programs which contribute to the overall security of the system.

Candidates should ideally have a minimum of 2 years commercial programming experience, preferably using

Assembler language. Additionally, experience in systems programming, or systems initialisation, and control would be an advantage.

As one of the world's leading international airlines, British Airways offers excellent conditions of employment which includes a holiday pay supplement, inflation-proof pension scheme, subsidised cafeteria, sports and social facilities and favourable holiday air travel opportunities.

If you like the idea, and you'd like to find out more, you can arrange an early interview by phoning BABS Systems Control on 01-759 5511 Ext. 5156/3232/3697 on Tuesday 19th or Wednesday 20th June between 6 pm and 8 pm or any day during normal office hours.

Alternatively, write to: Recruitment & Selection, British Airways, P.O. Box 10, Heathrow Airport-London, Hounslow, Middlesex. TW6 2JA.

British Airways welcomes applications from suitably qualified Registered Disabled Persons.

An exciting future for ambitious Microprocessor Engineers.....

We are expanding our Microprocessor Application Section and have development plans that will project us well into the 1980's and further. It's going to be an exciting time with lots of opportunities.

If you are aged between 20 and 30, have a Degree in Electronics, Computer Science or Mathematics you could be one of the people we are looking for. You need not necessarily have direct experience in microprocessor technology but, it would be an advantage.

What are the jobs? Our Microprocessor Application Section is involved in applying microprocessors to products and industrial control, using board and chip level microcomputers. Our expansion plans incorporate the need for people in two interrelated areas:

1. Software

You will be primarily involved in program development in assembler and high level language. You will be expected to work with minimum supervision to produce the complete software package - identifying requirements through to implementing systems. This will mean co-operating with hardware engineers and liaising with customers.

2. Hardware

You will be primarily concerned with component and system specification, with direct involvement in circuit design and printed circuit layout and analogue and digital interfacing.

For the successful men and women there are attractive salaries plus all the additional benefits you would expect from working for Britain's largest international engineering group.

Write today, enclosing a full curriculum vitae, and see if GKN can add a little planned excitement to 1979.

Write to:
Personnel Executive, GKN Group Technological Centre,
Birmingham New Road, Lanesfield, Wolverhampton, WV4 6BW.

PROGRAMMERS

Henley-on-Thames c. £5,000

Spring Grove Services, a leading company in the garment rental business, requires Programmers to work on new developments in the company's operations.

Our present system run under GEORGE 2 on an ICL 1903T, with a subsidiary company in Holland using an IBM System 32. The market is changing rapidly and our systems must change to remain competitive. To this end we are investigating the use of microcomputers and micro-electronics and the techniques of distributed processing.

We need Programmers who can come up with good ideas as well as good software. Two years' COBOL experience is essential and a knowledge of SPAD, ICL 1900 or IBM System 32 machines would be an advantage. The successful applicant will join a highly skilled team based in Henley. There will be opportunities to travel to our processing centres throughout the U.K. There are attractive company benefits including free insurance and a contributory pension scheme.

MYRIAD

ICL OPERATIONS SUPPORT

S.W. LONDON

NO SHIFTS

£5000-£6500

A major international organisation with extensive interests throughout Europe and Africa and a turnover in excess of £120M, our client is a well-established ICL user. A substantial upgrade has been undertaken recently and the present dual 3Mb 2860 configuration under VME/B with extensive T.P. is probably one of the most sophisticated in London.

The role of the operations support team is to write SCL then implement and support production systems and provide a comprehensive consultancy service to the operations and production control departments. The company is now extending this team and is able to offer a number of outstanding opportunities to ICL operations staff at two levels of experience.

★ 1900 GEORGE II/II + Operations Personnel — If you can offer a sound background incorporating experience of JCL, utilities, program libraries and macro's then the company will provide extensive training in VME/B SCL and all aspects of 2860.

★ 2900 VME/B Support Personnel — If you have experience of operations support and writing SCL in a System 8 environment this is an ideal opportunity to develop and enhance your expertise as a senior member of an expanding team.

The commencing salaries are in a range according to experience and the positions offer a highly rewarding future with excellent opportunities for career progression within a sophisticated installation.

VIDEOM

HENLEY-ON-THAMES

Assembler Programmers

Videcom Ltd. are manufacturers of the world's first multi-host computer terminal facility with an impressive installed base worldwide including numerous international airlines and major corporations utilising its products in sophisticated communications networks. Due to continued rapid expansion Videcom urgently require experienced Assembler Programmers. If you are self-motivated and have 1-4 years Assembler experience this is a superb opportunity to join an expanding organisation.

If the prospect of working with a small team on exciting state-of-the-art communications projects in the pleasant surroundings of Henley-on-Thames is appealing, then come and talk to us.

Salary will be competitive and will appeal to those already earning in excess of £5,000 per annum.

Phone Logistix on 01-491 4636 who are retained as selection consultants or write direct to Mrs. M. Barker at Videcom Ltd., Newtown Estate, Reading Road, Henley-on-Thames, Oxon RG9 1HG.

360 Oxford Street,
London. W1N 9HA.
Tel: 01-491 4636

Senior
Computer Operator
Redhill

Philips Research Laboratories require an experienced operator to join a small team in the Computer Department.

The Department runs a computing service for scientists and engineers involved in many varied areas of research. It is based on two ICL 1904S processors, using a special version of George 3 which allows both to access the same file store. A Digico 1603 front end connects 38 terminals. In June an SEL 32 computer system will be installed to do CAD of integrated circuits.

The person chosen will be involved in all usual aspects of operating, and

will also be required to assist and deputise for the Chief Computer Operator in organisational and technical matters. Consequently, several years of 1900 and George 3 experience are essential, together with a technical knowledge of communications equipment. The ability and flexibility to learn about new systems is also needed. A five-day week is worked, normally 8.30 a.m. to 4.30 p.m. with shift hours (five times in two weeks) from 2 p.m. to 10 p.m. Please apply to Mr. M. L. Malpass, Philips Research Laboratories, Cross Oak Lane, Salfords, Redhill, Surrey, quoting reference No. 133.

Are you as good with
people as you are with
computers?

Data training - in the past 8 years has become one of the
largest and most successful computer training companies in the UK. The high
standard of our courses has attracted companies in all spheres - corpora-
tions, government departments, local authorities and computer bureaux.

The number of students attending computer courses is
continually increasing, which is why we need to recruit more people to our
lecturing staff now.

In addition to looking for experienced pre-programmers we also
seek a programmer with specific ICL 2900 experience who wants to use his
skills to get involved in a rapidly developing area of computers.

You should be mature with the ability to talk to people,
communicate your skills and experience clearly and concisely.

After an initial training period you will be kept
between delivering courses, compiling reports, creating students,
installations and ensuring the training course is well developed,
comprehensive and practical as possible.

You'll enjoy an excellent salary between £5,000 to £10,000
with an annual bonus and monthly commission based on profit. Always
you will enjoy the challenge and reward which is part of an interesting life
and the satisfaction which can be derived from a successful day of students.

If you think you are equipped with people and computers,
we'd like to hear from you.

Ring up to 200 p.m. tomorrow on
interview, or the best way about our informal
discussion which are held on Saturday morning.

YEovil DISTRICT COUNCIL

TREASURER'S DEPARTMENT

COMPUTER
PROGRAMMER

Salary up to £4146 inclusive (pay award due
1st July 1979)

The Council's computer is an ICL 2903 with EBC 80's and
on-line enquiry facilities. The post offers a wide variety of duties
mainly in the area of programming, operating system main-
tenance and software up-dates.

Programming languages are RPG II and FINS 2 and previous
experience is desirable but not essential as on-the-job training
courses will be provided.

The area is an attractive mixture of rural and urban develop-
ments. The district is pleasantly situated and its boundaries
extend to the foot of the Polden Hills in the north, the
boundaries of Devon and Dorset in the south and east and the
Blackdown Hills in the west.

Financial assistance towards relocation expenses up to £1,000
and housing accommodation will be available in appropriate
cases.

Application form and job description available from
Personnel Officer, 51 Preston Road, Yeovil, Somerset
BA20 8DP or telephone Yeovil 8272 ext. 222.

2960 SHIFT MANAGER

**£5000-£6000
+ Shift Allowance**

Due to a recent promotion, we have an opening for an Operations professional to join the Bureau which is at an early and interesting stage of development. The person appointed will enjoy wide responsibilities and also have excellent visibility within the Group for future career advancement.

Our main requirements are:—

- ★ 2900 practical experience using VME/B.
- ★ Operations staff supervisory experience.
- ★ A mature, responsible outlook with a strong desire to meet targets.

In addition to a salary within the above range the usual terms and benefits of a large Company will apply. Please write in the first instance giving details of age, qualifications, and experience to:

SAFE
COMPUTING LIMITED

J. A. Thomas, Computer Operations Manager
Safe Computing Limited, Intersection House
110-112 Birmingham Road, West Bromwich, West Midlands B70 6RX.

Our computer installation — an ICL 1902T 80K operating under George II is an efficient, busy environment, with many new developments taking place.

It is at this interesting moment that we need a senior operator to fill a vacancy resulting from internal promotions.

As we will select someone who is obviously committed to the computing world, who aims to go further, and fast, we'll give every practical encouragement to the successful applicant including professional training by courses and on-the-job tuition. There may also be opportunities for promotion either within the operations and programming sections and on to systems analyst if the ability is there.

Starting salary up to £5,000 for an experienced computer operator, including allowances for the 2 shift structure. Benefits include car purchase scheme, 4 weeks holiday and company pension scheme.

Please apply to:
Maureen Croes, Toyota (GB) Limited,
320 Purley Way, Croydon, Surrey
CR9 4HB Telephone: 01-681 1821
Interviews will be held at our Crawley office.

Recruitment

in Informatics

Fortran Programmers West Germany

Salary: £16K

The leading Scandinavian Systems and Turnkey Supplier with offices in Scandinavia, Netherlands and U.S. requires Fortran Programmers for its expanding West German operations. There is a distinct possibility that the successful candidates will be able to relocate to the Company's Head office. Whilst the applications under development are sophisticated Real-Time Projects previous experience of Real-Time is not absolutely essential but in-depth Fortran and Assembler programming expertise is a pre-requisite.

Preference will be given to those candidates who have very recent or current experience on UNIVAC 490/4 or UNIVAC 1100 series. Of course, willingness to relocate to a most attractive part of Rhineland, Germany is absolutely essential. To assist in your removal our client will meet all relocation expenses in addition to providing initial paid accommodation. A Senior Manager from our client's Head Office will conduct interviews in late June. Ref: L/7/05/A

Mini Cobol Programmers Netherlands

Salary: £12K + Car

A small but expanding Systems House Supplier having its product line on both Zilog 280 and Intel 8085 microprocessors is shortly to release new hardware and software on to the Dutch market. To support the anticipated sales growth our Client is seeking a Programmer aged mid-20's with several years COBOL (preferably mini or micro based) programming experience. Initially the successful candidate will be sent on an intensive all expenses paid

Dutch language course and will then be expected to support the Company's range of products from its West Netherlands base. Supplemental to an above average salary you will receive a car for business and personal use and assistance with initial accommodation expenses. Interested candidates should respond immediately as interviews will take place by the end of this month. Ref: L/7/05/B

MIS Manager Thames Valley

Salary: c£10K

Applications are invited from candidates aged 28—35 years who are currently working with mini-computers either in the role of Project Manager or Systems Consultant. Our client does not attach any particular significance to specialised hardware or software involvement but it is an absolute requirement to have very recent or current application experience in the areas of stock/inventory control, on-line order

processing systems or warehouse automation projects. The successful person, based in the Thames Valley, will be required to travel extensively within E.E.C. especially Germany and Netherlands. Spoken language ability in German or French is a decided advantage but not essential. We will be drawing up a short-list for interview by the end of this month so early applications are recommended. Ref: L/7/05/C

U.S. Insurance Group City of London

Salaries £6.3K — £8K

A major American owned Insurance Group with total worldwide assets of \$750 million will pay above average salaries for top-calibre personnel to work within its expanding Management Services Unit. The U.K. head office has recently ordered an IBM 3031 to supplant an existing 370/148 operating under DOS/CICS/VS. Systems Analysts, Applications and Systems Programmers with DOS/VS Assembler or COBOL and possibly some T.P. experience will be offered an excellent working environment at top

salaries working in the Life Assurance, Motor Insurance and Re-insurance Teams. Successful candidates will therefore be working on projects in the early stages of development so you are sure to expand your threshold of knowledge. In addition, our client offers free Life Assurance, Insurance Discounts, low rate Contributory Pension Scheme, free B.U.P.A., subsidised restaurant and flexible working hours. Interviews will be held on the company's premises throughout June. Ref: L/7/05/D

Database Specialists London and E.E.C.

U.K. £7 — 9K, E.E.C. £12 — 15K

Our international client has openings in London and the E.E.C. for Senior Database Administrators, Designers and Applications personnel with extensive Database experience on major main-frame and mini systems. Of particular interest are persons with expertise in IMS, Total, Adabas, DBMS, IDMS etc. More important than the actual hardware experience is an in depth knowledge of your relevant area of Database expertise. Our client is anxious to maintain

its prestigious standing worldwide by attracting proven and potential talent to join them in the development of advanced Database projects in commercial and technical environments. The opportunity to travel within Europe and the U.K. is available. Those who offer spoken language ability in French and German are especially welcome and the salaries paid will reflect this particular ability. Interviews will be held in London throughout June. Let yourself be drawn into the world of interactive graphic systems

An exciting opportunity has arisen for computer service engineers in

LONDON

S. YORKS.

SCOTLAND

Our client is already a leading name in the computer industry and is now looking for experienced engineers to spearhead the rise in their rapidly expanding interactive computer graphics division. This rare opportunity to join a new division in the early stages of its growth affords excellent and exciting prospects for future advancement.

Working from home initially you will be part of a small team maintaining interactive graphic systems comprising a minicomputer with the usual computer peripheral and graphic terminals. A good basic training in electronic engineering is essential and previous experience of graphic systems and V.7.7 hardware and software is desirable. However, in depth training will be given.

Salary scale of £8K to £8K p.a., depending on location and ability. + company car will be provided. In addition, there are big company benefits and rapid career progression within a dynamic environment.

So don't delay, ring Alan Slater or Peter Gorton, 9 a.m.-9 p.m.

Programmers and Analysts

Working in Amsterdam has
all the benefits of working
abroad and none of the
disadvantages

The advantages and disadvantages of working abroad are
well known. In favour you have high salaries, good career
prospects and no liability to UK tax.
Against you have the language problem, housing and
schooling for the family and the time and cost of travelling
home.
But our clients offer you a package that provides the best of
both worlds.
They offer Systems Analysts and Programmers with a
minimum of two years experience, free accommodation and
travelling, generous assistance with schooling (there is a
British Primary School in Amsterdam) and, as they are based
in Amsterdam where English is widely spoken, there is no
language barrier and you are only an hour's flight away from
England.
Salaries will be:

Programmers

£7,000-£10,000 pa

Systems Analysts

£10,000-£13,000 pa

and as a highly successful multi-national company they offer
involvement on an exciting range of development projects
utilising IBM equipment.

The appointments will be on a two year renewable contract
basis so why not make Amsterdam your home from home?
In the first instance, please write quoting ref: *Ref: 1* with full
career details, and listing any companies to whom you do not
wish your application forwarded, to Peter Phillips,

PROGRAMMERS

Barratt Shoes of Northampton have the following
vacancies in their D.P. Department.

CHIEF PROGRAMMER

Suitable for a Senior Programmer with five years' ex-
perience of COBOL and PLAN. It is envisaged that
suitable candidates will currently not be earning less
than £8000.

ANALYST/PROGRAMMER

Minimum 2 years' experience of COBOL plus the ability
to work on their own initiative are the requisites for this
appointment.

The current configuration is a 48K 1901T with tapes
and discs.

Northampton and the surrounding environment is a
pleasant area in which to reside. Housing is reasonably
priced and financial assistance will be given with
relocation expenses.

Salaries for both positions are negotiable, will be based
on experience and certainly above average.

To find out more, call us on

Northampton (0604) 715500, or write to:

Mr. DAVIES

ANALYST/PROGRAMMER

(SCIENTIFIC)

The Institution of Chemical Engineers requires an analyst
programmer for its Physical Property Data Service,
computerised data base for chemical engineering design
which is marketed worldwide.

The person appointed would be required to design,
implement user-oriented packages and interface a
variety of different mainframes.

Candidates should be self-motivated and have a thorough
knowledge of FORTRAN, be familiar with different
operating systems and possibly have a scientific
background.

Salary will be dependent on age, qualifications and
experience, probably in the range £4000-£5500 p.a.

Apply to:

AES/Wordplex is a market leader in advanced computer
based wordprocessing systems. They have achieved this
position by not only having an excellent product range, but
by also utilising "up-to-the-minute" promotional
techniques including television advertising, combined with
an aggressive marketing policy.

The present AES/Wordplex team, now well over 200
strong, is made up of young professionals selected from all
over the computer industry.

They have one thing in common — they are all
successful.

If you feel that you would fit into one of the following
three areas and can cope with **rapid career development**
in one of Britain's fastest emerging companies, **we want
to hear from you.**

SALES PEOPLE London, Home Counties, Birmingham, Leeds

So you're a success, but is your company?

Do they offer you the No. 1 product in its
field?

Do they understand the necessity of
first-class support and provide it?

Do they provide the innovative marketing
support to professionally promote the
product and the company?

Do they pay you what you're worth?

AES/Wordplex does all this, and more.

Remember, success breeds success.

AUSTRALIAN COMPUTER OPPORTUNITIES

THE MYER EMPORIUM LTD. Australia's largest Department Store and one of the World's largest retailing organisations have commenced what is the most exciting and significant Data Processing project in Australia today. It is envisaged that a new NATIONAL COMMUNICATIONS NETWORK, incorporating the Point of Sale, will be developed needing the latest "State of the Art" technology. A study has been initiated to establish the requirements of the new System, the STRATEGIC DESIGN and the STRATEGIC PLAN.

Several key people are needed NOW to participate in the study and then take part in the design, development and implementation. Location will be at the Corporate Head Office of Myer in Melbourne. Currently Myer operate a mix of IBM mainframes and NCR/POS terminals across Australia.

COMPANY INFORMATION:
The Myer Emporium was established in 1905 and currently employs 29,000 people in 122 stores and locations. The company is comprised of four profit centres.

Myer Department Stores
Target Australia mass merchandising division
Target Supermarkets food chain
Myer Shopping Centres Property development division

Their revenue for 1978 was \$US1.31 billion with planned annual revenue increases hence the need to greatly increase their Information Processing capabilities.

ABOUT MELBOURNE, AUSTRALIA:
Melbourne is the second largest capital city in Australia renowned for its sophistication, corporate headquarters, superb restaurants, cultural centre and also being the capital of Australian football. It is built on a beautiful bay offering superb boating.

Positions Available

SYSTEMS DEVELOPMENT MANAGER
Reporting directly to the Manager of Corporate Information Services. The successful person will plan, lead and control a large team (around 80) D.P. professionals. It is expected the person will have a minimum of 12 years D.P. experience and currently be in a senior position.

Because of the scope of the project a complete understanding of Systems Development Methodology will be needed together with current knowledge of Data Communications and Data Base design. A successful Management record is a prerequisite, considering the importance of the development to the MYER Group of companies. Retail and transaction experience would make the person ideal.

Remuneration will be by way of a package comprising a salary, company car, executive benefits and it is thought that \$US60,000 should be taken as a guide. All relocation costs will be paid to Melbourne.

TECHNICAL SERVICES MANAGER
The position also reports directly to the Manager of Corporate Information Services. This is a unique opportunity for a person with experience and a sound working knowledge of Network Engineering, Hardware and Systems Software Support and Maintenance, Research and Development, to obtain the type of career position that many only dream about.

The successful appointee must take full responsibility for designing and implementing a nationwide mixed supplier Data Communications Network, plus Design/Evaluation/Selection of Systems Software.

An exciting function of this position will be the Research and Development of new Hardware and Software announcements in order to appreciate the impact of the Strategic Design. Apart from a high technical capability a strong management track record is essential. Knowledge of MVS and IMS will be imperative.

Remuneration will be by way of a generous salary plus a company car and executive benefits, but \$US45,000 should be taken as a guide. Relocation costs will be paid to Melbourne.

DATA BASE SPECIALIST
The Myer Information Services Group also need people who have designed, developed and implemented substantial IMS Data Bases. These people will take primary roles in Designing, Developing and Implementing the Myer Data Base. The opportunity offered here is unparalleled in Australia.

Remuneration will be by way of a generous salary plus executive benefits, however \$US33,000 should be taken as a guide.

PROJECT TEAMS
As the strategic plan is developed a large number of D.P. professionals will be offered, technically and financially rewarding career positions as Analysts, Programmers, Network Engineers, On-Line Specialists etc. If you have in excess of five years recent practical experience with Retail and Commercial applications, On-line/D.B. commercial applications, IMS-MVS-OS/VS II Systems Software then you should apply now.

ACTION
Battles and Associates of Sydney, Recruitment Consultants since 1971, have been appointed International Search Consultants for the Myer Emporium.

The Joint Managing Director of Battles and Associates, Kevin D. Howard will be in London from the 24th to 28th June. He will be staying at the Churchill Hotel (telephone 011 488 8800), and welcomes calls from those people who are genuinely interested and have the experience and a true desire to emigrate to Australia.

All written responses should be directed as quickly as possible to:

Kevin D. Howard
BATTLES AND ASSOCIATES

116 Pall Mall
London SW1

ADDS (UK) LTD

A subsidiary of Applied Digital Data Systems Inc.

Software Support Managers UK or Europe + Software Analyst

A 'Ground Floor' opportunity in Micro-Based Systems

Applied Digital Data Systems (ADDS) is one of the world's leading suppliers of micro-processor based, small business systems and the largest independent manufacturer of display terminals. A European operation is already well established and the company is now involved in a campaign of considerable expansion via a network of OEM distributors and large-scale end users.

A key element of this planned growth is the appointment of two software specialists operating in the UK based on

London & Manchester

and the appointment of a further specialist also based on London operating throughout

Europe

Each software specialist will be responsible for providing systems and applications software support for the Regent 300 and ADDS System 75 in the context of both end user and sales support.

It is anticipated that the successful candidates will have good experience of applications software related to small business systems and preferably have relevant experience of floppy and/or fixed disk systems, Basic, Assembler and operating software. Knowledge of data communications would be desirable.

Salaries for these positions will range from

£5,500-£8,500 + Car/Car Allowance

plus business expenses where relevant.

Please contact Bernard Conn or Caroline Connabeer quoting reference number ADD061

SMR Sales & Marketing Recruiters Ltd.,
Victory House, 99 Regent Street,
London W1R 7HB.
Telephone: 01-734 9776.

Systems Programmers — all levels

In order to develop our next generation of micro-computer based terminals we need innovative Programmers who are looking for an opportunity of applying their abilities to the design and development of complete systems.

Those abilities should include the capability of taking a product from initial concept through design and development into production.

Specifically, you will be involved on all of the following:

- * Operating Systems
- * Interpreters
- * User Interfaces
- * Maintenance and Diagnostic Routines

Previous experience in any of the above would be useful but not essential, enthusiasm, being the most important factor.

We are looking for Systems Programmers at all levels, from recent graduates to those with many years of experience who are looking for a new challenge.

Initially you will be based at Croydon although some travel will be necessary in order to fulfill your job responsibilities. Long term career opportunities exist both in the UK and overseas.

The compensation package will reflect the importance placed on these positions. Salary, in particular, will not inhibit selection of right persons.

Please write or call, Cliff Marks

TELEPHONE: 01-549 6441-9

ARE YOU FRUSTRATED IN YOUR CURRENT POSITION?

JOB SATISFACTION?

SDI REMUNERATION?

LACK OF ADVANCEMENT?

THIS COULD BE JUST WHAT YOU'RE LOOKING FOR

SDI, the largest independent DOS, DOS/VS and soon DOS/VSE systems software company in the world has just formed a new group at its Development Centre near High Wycombe (Bucks), to provide Technical Services to the world-wide marketing organisation as well as internally to the Development teams.

If your current job does not offer you the satisfaction and challenges you desire then read on to see if you are the sort of person required for this new team.

The positions available are varied and will at times involve visits to customers in all countries in which SDI operates, as well as the provision of technical services to marketing companies and internally to the Development Centre. Initially, there are four positions available:

1. Technical Administrative Officer: who will provide technical and marketing assistance to the world-wide marketing organisation, as well as the creation and administration of various internal training schemes and procedures.
2. Product Assurance Controller: who will provide a new improved level of quality control procedures, external to the Development teams' current high standard.
3. Applications Programmer: who will design, document and write applications suites for internal use.
4. Technical Writer: who will be responsible for updating of current documentation and creation of internal and user documentation for new products using a computer based text system.

Successful candidates will also have the opportunity to qualify as Product Specialists and thereby be involved in the launch of new products and features world-wide.

You will have the opportunity of joining a dedicated group of professionals who are currently working towards filling the gaps left by IBM's recent 4300 series announcement.

The remuneration package offered consists of:

- Above average salary
- A brand new building offering an excellent working environment
- Relocation assistance where necessary
- Life and disability insurance schemes
- Pension scheme
- Unlimited career growth opportunities

If you possess some or all of the following skills and abilities:

- Are a bright self-starting individual able to get on with the job with minimum reference to superiors.
- Consider yourself to have an excellent understanding of DOS/VS.
- Have had some system programming experience.
- Have had some applications programming experience.
- Consider yourself to have an excellent understanding of System/370.
- Have had some experience with GRASP or GRASPS (desirable but not a prerequisite).
- Have had some operating experience (also desirable but not a prerequisite).

then why not give Robin Bailey a call on High Wycombe (0494) 2094 / between 09.00 and 17.30 weekdays, to find out more, or write to:

SDI, PO Box 84, High Wycombe, Bucks.

SIEMENS

Technical Translators (German/English)

If you are a technically minded linguist or a linguistically gifted engineer or programmer, this could be your opportunity to take up a new, rewarding challenge in Southern Germany.

Our Language Services Department, based in Munich, has a number of openings for translators to work on English technical documentation in one of the following areas:

- Data Processing (hardware and/or software)
- Data Switching Systems
- Semiconductors.

These positions are suitable for native English speakers with a sufficiently thorough knowledge of German to be able to clarify the technical content of the German source text in consultation with the engineering or programming staff.

Successful candidates will be offered all the benefits of a large international company, including excellent salaries and generous holidays.

Address your application to:
The Personnel Manager, SIEMENS LIMITED
Siemens House, Windmill Road,
Barnsbury, London, N1 1 7HS.

MANAGEMENT & EXECUTIVE SELECTION

University of Birmingham

THE COMPUTER CENTRE

The Centre already provides a wide range of local and remote computing facilities to the University. These are now being further extended by the installation of a DEC 2050 interactive system for both teaching and research and by the development of an internal network which will have links into the Midlands Universities Computing Network.

To help support these extended services applications are invited from graduates for the following posts:

COMPUTER OFFICER Operations Group

to assist with the management of the DEC 20 installation, to provide technical hardware and software support in the area of telecommunications and overall involvement in the selection, design and construction of specialised hardware.

Candidates should have management ability and several years proven experience in the design of digital or telecommunications systems.

SENIOR HARDWARE ENGINEER Operations Group

to be responsible for the day-to-day running of the technical workshop and the construction and maintenance of equipment associated with the network.

Candidates should have practical experience of telecommunications within a computer environment.

COMPUTER OFFICER User Services Group

to participate in the work of the Group which is responsible for writing and supporting application packages and providing advice, instruction and documentation on the use of the Centre's facilities. Candidates should be sympathetic to the needs of novice users and preferably have expertise in:

* statistical data processing *

ADVISER FOR INTERACTIVE COMPUTING

This new Computer Officer post has been created in the User Services Group to develop the practical application of:

* CAI and CAL techniques *

The post is tenable for two years; secondment would be welcome. Candidates should have computing experience especially in the areas of simulation and modelling techniques using on-line graphical displays.

For the Computer Officer posts, a higher degree is desirable but in all cases clear evidence of previous work successfully completed is essential.

STARTING SALARY FOR COMPUTER OFFICERS, ACCORDING TO AGE, QUALIFICATIONS AND EXPERIENCE, WILL BE ON THE SCALE:
£3775-£6355 (BAR)-£7621 (from 1.10.79).
AND FOR THE SENIOR HARDWARE ENGINEER ON THE OTHER RELATED 1A SCALE:
£4333-£7621 (from 1.10.79).

Further particulars are available from the Assistant Registrar, Science and Engineering, University of Birmingham, P.O. Box 363, Birmingham B15 2TT, to whom applications (3 copies) including curriculum vitae and naming three referees should be sent by Friday, 29th June, 1979. Please quote reference C24.

Sir Frederick Snow & Partners
Consulting Engineers

COMPUTER PROGRAMMER

with Management Potential

We have the need for someone to co-ordinate and control our small computing section whose activities embrace both engineering and financial accounting applications.

The section has a staff of four and the equipment includes a Prime 300 Computer System and a PDP/11/20.

The post offers excellent opportunities for the use of initiative and leadership in a developing environment, and we believe it would be ideally suited to a programmer in his/her early 30s who has the potential to extend his/her career in a managerial role.

If this appointment is of interest please write giving details of your age, qualifications, experience and salary required to:

Melvyn Jones

GAF

Database Staff for the Oil Industry

The British National Oil Corporation is currently embarking on major Database system developments in a number of application areas.

Several key posts now require to be filled by people with experience in Database design and implementation. These are challenging opportunities for D.P. professionals to become involved at the earliest stages in the development of an exciting range of applications on Hewlett Packard 3000 and large mainframe equipment.

We are anxious to meet people who have proven experience as:

SENIOR ANALYST/ANALYST
SENIOR PROGRAMMER/PROGRAMMER

but need not have previous experience of the oil industry.

BNOC

The British National Oil Corporation

If you have sound experience of Database development using a COBASYL based system such as IDMS, TOTAL or IMAGE/3000, these posts offer great potential for job fulfillment and personal career development.

If successful you will be offered a salary which fully reflects the importance of these positions. Other benefits will include an excellent pension scheme and generous relocation assistance where appropriate. Location is in Glasgow.

If you are interested in any of these positions please apply to:

The Recruitment Officer,
The British National Oil Corporation,
150 St. Vincent Street, Glasgow G2 5LJ.
Telephone Number 041-204 2525.
The closing date for receipt of applications is 19th June 1979.

THE ST. HELENS COLLEGE OF TECHNOLOGY
Principal: C. P. Gray, B.A., D.M.S., A.M.B.I.M.
SCHOOL OF MANAGEMENT STUDIES

PRINCIPAL LECTURER / DIVISION HEAD IN INFORMATION SYSTEMS

The School of Management Studies (part of the North West Regional Management Centre) has a well-established reputation both regionally and nationally in the fields of post-graduate and post-experience management education.

This is a senior appointment with major responsibilities. The division head will be required to lead a group of staff from several quantitative disciplines and to work closely with the School's other division heads. The person appointed will have general responsibility for the N.C.C. Basic Systems Analysis course and for the development of the computing content of all management studies courses in the School. He/she will also be expected to contribute to the development of computer studies in the College as a whole.

Candidates, who will be graduates, must have up-to-date knowledge of computer based information systems including microcomputers and hold or have recently held a senior position in business in this field. Teaching experience would be an advantage.

Salary: £7,047 to £8,844 (under review).

Application forms and further particulars are available from the Principal's Office, The St. Helens College of Technology, Water Street, St. Helens, Merseyside WA10 1PZ and should be completed and returned within fourteen days of the appearance of this advertisement. Please quote Ref. No. 1/CW.

BRIGHTON POLYTECHNIC COMPUTER CENTRE

The Centre provides an extensive multi-media and batch educational computing service currently based on ICL 1800A (1200), HP 2000 G & 9400 and Harris 5126 (3300) computers and planning is about to start for major developments in the 1980s.

Applications are invited for the following vacancies:

1. SENIOR SYSTEMS OFFICER

(Headship)

(£4301-£2686 and under review)

To undertake development in the areas of microprocessors, data communications and hardware oriented solutions to service problems.

Further details and application forms may be obtained from the Personnel Officer, Brighton Polytechnic, Moulsecoomb, Brighton BN1 9QJ. Tel: (01273) 833155. Closing date: 15 June 1979.

2. SYSTEMS PROGRAMMER

PROGRAMMER/ANALYSTS

Grade AP4 £4566-£4983 p.a. inclusive.

We are looking for a Programmer/Analyst with two to three years' experience in COBOL and FORTRAN interested in working on advanced management information systems and computer-aided design.

These systems are being developed on a range of machines, from mainframe, through time-sharing, to minis.

The person we are looking for should have relevant qualifications and be able to work with the minimum of supervision. Experience of data-base management systems would be an advantage but is not essential. The post will probably be attractive to a Programmer who wishes to move into Systems Analysis.

Flexitime worked.
Hillingdon is situated to the west of Greater London, borders on Bucks and Hertford and offers access to Central London. One third of its 42 square miles is Green Belt.

Application forms from the Personnel Officer, Hillingdon, Middlesex UB8 3PH. Tel: (0181) 606 1111. Closing date: 15 June 1979.

**LONDON BOROUGH OF
HILLINGDON**

Do more interesting projects always attract more interesting people?

If you're a programmer with anything from two years' experience upwards, come and talk to us. We'll quote chapter and verse of how your experience could give you more variety, more involvement and more responsibility than you've ever imagined for yourself. At Software Sciences, we can justifiably claim to have more than an average share of interesting and challenging software projects.

For example, we're implementing the largest single turnkey project ever awarded to a UK Systems House. We in fact have over one hundred projects live at any time ranging across the commercial, scientific, government and defence fields. These include top-level consultancy assignments on most machines, demanding software production and a growing portfolio of turnkey assignments on a variety of minis and micros. All of these offer a unique breadth of exposure to different kinds of hardware, operating systems and languages which makes for a very special environment with the computer industry.

Also, we're handling advanced R & D work on compilers, programming tools and system development aids that will serve the computer industry for the next decade. On our people side, our record is equally distinguished. It has, and always will be, our conscious policy to select men and women of exceptional ability, and to develop their ability through close involvement in a wide variety of work. We'd like to meet some more talented individuals, and to offer them the rewards that a high degree of personal ability can command with us. The length and breadth of experience required varies with the individual needs of our project work — but the variety and scope of our projects allows for openings at all levels.

The one thing which all candidates should have is the desire to succeed and at Software Sciences you will be given the opportunity to do so. If you have this desire and the ability to rank with the Market's leaders, then a sensible step would be to talk with us about your future ambitions, initially by phoning SARAH CHAMBERS on the following number. Alternatively you may prefer to write to her at the address shown below.

BE YOUR OWN BOSS

An exceptional opportunity is available to a limited number of experienced, competent and ambitious programmer/analysts or sales people throughout the U.K. who have some minicomputer and business applications experience.

If you feel you have the ability and strength of character to own your own business, but are handicapped by only having limited capital, then write to us now with full C.V. address and home telephone number. All replies will be dealt with in the strictest confidence.

If you qualify for this scheme, very substantial finance and management facilities will be placed at your disposal for only a nominal capital investment.

High fliers contact us now at Box 1027, Computer Weekly.

DEVON EDUCATION COMMITTEE

North Devon College

Principal: Q F Hind, JP MA MBIM

Applications are invited for the post of

LECTURER GRADE I IN COMPUTER STUDIES, DATA PROCESSING AND STATISTICS

In the Department of Business Studies to date from September 1, 1979. The successful applicant will be required to teach these subjects mainly to BSC General and National Diploma/Certificate courses. Candidates must have a working knowledge of BASIC, COBOL and PL1 programming languages. Proficiency in teaching and the ability to be of interest to a candidate wishing to obtain a first post in education.

The present salary is £3,192 to £5,334, subject to review from 1st April 1979, with a commencing salary dependent on qualifications and industrial or teaching experience.

Further particulars and forms of application can be obtained from the Principal, Barnstaple, Devon.

UMIST

MULTI MICROPROCESSOR GRAPHICS RESEARCH

A vacancy exists in the Microprocessor Engineering Unit of the Department of Electrical Engineering and Electronics for a Research Assistant to work on a special purpose microprocessor graphics system. The successful candidate will have experience in digital hardware design, experience with microcomputer or microprogrammable hardware, and preferably some programming experience. The objective of the research is to produce a high performance printed circuit board layout system which uses an dedicated hardware units to perform fast route searching.

Initial salary will be up to £5691 per annum and the appointment will be for two years in the first instance. The successful candidate may be able to negotiate for a higher figure. Write for an application form and further particulars, quoting reference EEC/85 to the Registrar, UMIST, P.O. Box 88, Manchester, M60 1UD, to whom they should be returned by the 5th July, 1979.

COBOL PROGRAMMING LECTURERS

Salary Negotiable

Vacancies exist for experienced programmers to teach COBOL to students of Holborn Tutorial College. A generous negotiable salary linked with other fringe benefits is offered.

Please write or telephone

OPERATOR

Required for leading West London Auctioneers and Estate Agents based in W.12. Salary negotiable.

Please contact Will Motte, 01-743 4444. Ref. TMHM for further details.

Scientific Programmers/ Analysts

Scientific Computer Centre- Croydon

The Scientific Division of ISA-UK uses a DEC 2050 computer to provide a timesharing computing service to scientists and engineers within Philips Industries. There are currently vacancies for Scientific Programmers/Analysts in the following areas:

1. The support, promotion and maintenance of a large circuit analysis package used extensively within the Philips Group of companies. This will involve some travel, normally of short duration, both in the UK and to Europe.
2. To join a team providing support for several CAD/CAM packages. This includes applications for PCB layout, numerically controlled machine tools and general graphical devices.

Candidates should have a degree or equivalent qualification together with two years' FORTRAN experience preferably gained working in a large scientific project. Experience of DEC10, DEC20 or IBM 370 software and CAD/CAM applications would also be an advantage. The ability to communicate clearly with other team members and users is of importance.

The salary will be of interest to applicants currently earning £5,000+ and benefits include 23 days holiday, pension scheme, staff purchase scheme and assistance with relocation where appropriate.

If you would like to discuss either position please telephone Dr. Sambles on 01-688 7766 extension 2574 or contact Valerie Apps, Divisional Personnel Officer, ISA-UK Personnel Department, City House, 420-430 London Road, Croydon, Surrey CR9 3QR, telephone 01-689 2166 extension 2034, for an application form.

PHILIPS

Turn Real Time Mini on for up to £10,000. Or more

Do it any time you like. Phone in the morning, afternoon, evening, 11 p.m., weekends even. The number is 01-836 9719. Failing that, 01-836 9882. Ask for Beryl. You'll get an answer. In the flesh — none of this answering machine stuff.

But do, please, be sure you're who we want to be turned on by. PROGRAMMER, PROGRAMMER/ANALYST, SYSTEMS DESIGNER or PROGRAMMER, SOFTWARE ENGINEER, PROJECT MANAGER or HARDWARE ENGINEER.

With at least a year's Real Time Mini or Micro experience, any configuration, Assembler and/or high level language.

DEC experience — especially using RSX11, RSTSE, Intel, Motorola Micro or Interdata 32 — is even more of a turn-on.

And a degree as well — computer science or other maths-orientated subject — could cause distinctly heavy breathing.

What do you get for all these answers to a maiden's prayer?

Not just money (see above). Also very interesting applications. Commercial business systems, Customer support — various roles. Process control, Flight simulation, Micro processing, Word Processing, Communications — tele and otherwise, Message switching, Lecturing and training, Military systems, Automatic test systems.

Locations. London, Home Counties and further afield — including E. Europe.

Ring Real Time Mini's 24-hour, personal answer hot line now — 01-836 9719 or 9882. Day or night, ask for Beryl McLaren.

SYSTEMS DEVELOPMENT THE KEY TO OUR FUTURE.

Making systems really work for the business.

As a major international manufacturing company, we realise how vital new computer hardware and systems will be in the 1980's.

We know that our ability to compete successfully in the future depends on our present level of investment.

The first phase of this investment is almost complete, we are installing a powerful range of mini computers linked to an IBM 3031 mainframe. The IBM is already operational and the whole system will soon be going live.

Phase two could involve you. Even more important than the hardware is the talent, experience and know-how behind it.

Currently we need to strengthen our teams with the following people:

Project Co-ordinators Senior Analysts Analysts · Programmers Operators

The range of appointments means your systems experience could be anything from 12 months to 12 years. Comprehensive experience in a manufacturing business but a limited systems background would also be acceptable.

We are offering a rare and exciting opportunity to make computers come alive in a manufacturing industry and we want to talk to men and women who can meet this challenge.

The nature of the projects means you will gain valuable experience in: database systems, distributed processing, on-line networking and process control of mechanical equipment. You will be providing vital initiative and guidance to the business, whilst enhancing your knowledge of the latest advanced technology.

What about the financial rewards? For Project Co-ordinators the starting salary is up to £7,000 p.a. For the other positions the starting salary is up to £4,900 p.a. We also operate a productivity bonus scheme which has provided substantial rewards. The many other benefits include a preferential car scheme.

Our location in the north west of England is convenient for major cities,

the coast and superb countryside. Generous relocation expenses will be paid where appropriate.

So, if you would like to join a systems team with a vital role to play, write to Whites Recruitment Limited, with details of age, qualifications, career and salary progression to date, who will forward your application promptly.

R. D. Taylor, Regional Manager,
Whites Recruitment

Phoenix House, 45 Cross Street,
Manchester M2 4JF.

Please quote Ref. No. 2204 and list the names of any organisation to whom your letter may not be sent.

COMPUTER OPPORTUNITIES IN YORKSHIRE

Here's a job for you as a **SYSTEMS ANALYST RN441**. £5882-£6084 p.a. pay award pending.

You'll be based in Bradford so you can live within minutes of the beautiful Yorkshire Dales and National Park.

You'll be working with the latest equipment — our new 3M Byte I.C.L. 2870 running under VM E/B. You'll be an important part of a project team helping to design, test and implement computer systems using your initiative, demonstrating your problem-solving communicative abilities.

If you've at least 3 years' experience in computers preferably with a programming background we'd like to hear from you.

Or how about a job as **COMMERCIAL PROGRAMMER RN 642** £4635-£4862 p.a. pay award pending.

Writing COBOL programs on our I.C.L. 2870. You'll be working on a wide range of Commercial Projects.

It's a job with promotion opportunities either within programming or into software or systems depending on which path you wish to follow. You only need 2 years' experience — our excellent training facilities will soon develop your potential.

For either of these posts if you need to move we'll give you generous relocation expenses. You can also take advantage of bridging loan facilities and lodging allowances to make your move easier.

The authority has a good pension scheme.

Application forms are available from the Regional Personnel Officer, Yorkshire Water Authority, West Riding House, 87 Albion Street, Leeds LS1 5AA. Tel: Leeds 44 8201 Ext. 269.

To be returned by 18th June, 1979. Quoting the appropriate reference number.

LOUGHBOROUGH UNIVERSITY OF TECHNOLOGY

ENGINEER OR SCIENTIST

Applications are invited for a LECTURERSHIP in the Department of Engineering Production from graduates with a degree in Engineering or a related discipline. The successful applicant will be responsible for the teaching of the subject in the Department of Engineering Production. The successful applicant will be responsible for the teaching of the subject in the Department of Engineering Production.

Salary within scale £4232 to £8462. Further details and application form from Prof. Johnson, Establishment Officer, ref. 70/18 EN Loughborough Loughborough

Puzzle Answer

If n equals the sum of the 12 numbers used, then 8x=2n, and 6y=2n. This means that n must be a multiple of 12, which leads immediately to 1+2+3+4+5+6+8+9+10+11+12+13=84. The basic distribution pattern is shown below.

THE UNIVERSITY OF LANCASTER

COMPUTER SERVICES DEPARTMENT

SYSTEMS PROGRAMMER

The department is to install an ICL 2902 in June 1979 to run initially under VM/370. The Systems Programmer will develop VM/370 and/or 7008 software to allow a connection to the existing North West University Network. A degree or equivalent qualification is necessary and a knowledge of large operating systems and/or communications would be an advantage, although graduates with previous experience as a computer user and with an interest in systems programming will be considered.

COMPUTER STAFF

Coras Iompair Eireann (Ireland's National Transport Company) wishes to recruit a number of people to join an experienced team of computer professionals. The positions are based in Dublin. These applicants will work on advanced and existing development projects.

The company uses a variety of computer hardware — IBM systems 370 computer running under VS/1, and several DEC 11/70 and 11/34 computers, running under RSX 11/M.

SYSTEMS DESIGNERS

The Systems Designers will join an experienced systems group, with responsibility for developing and implementing new systems. The successful applicants will have a sound knowledge and experience of systems design and will have had responsibility for developing and implementing systems. Experience gained in a large organisation or software house would be advantageous. Experience of programming is also desirable. An accounting qualification or engineering degree or equivalent would be particularly appropriate.

SYSTEMS PROGRAMMERS

The Systems Programmers will assist in maintaining and developing the operating systems in the installation. They will have a keen interest in the technical aspects of computing. A degree in Computer Science or of a similar qualification is desirable. The successful applicants will have experience of operating systems in an IBM (370) and/or DEC (RSX 11M) environment.

PROGRAMMERS

The Programmers will have a good experience of up to two years' duration. The main programming languages used are: COBOL, ASSEMBLER, FORTRAN IV plus. Experience in writing teleprocessing/real-time software will be an advantage.

TELEPROCESSING ENGINEERS

The expansion of the teleprocessing network has generated a need for the appointment of two graduates Electrical Engineers who will be members of a team concerned with the selection, installation and operation of an expanding range of equipment.

This positions should be of interest to computer professionals who wish to be in the forefront of computer systems development using State of the Art techniques. The general conditions of employment and the responsibilities of the work. The general conditions of employment and the responsibilities of the work. The general conditions of employment and the responsibilities of the work.

Applications which will be treated in confidence should be sent by 30th June to: Staff Relations Manager, CORAS IOMPAIR EIREANN, Ireland House, 150-151 New Bond Street, London W1Y 0AQ England.
